

Comments of the Maryland Chapter, Sierra Club on the CBP's Management Strategies and Draft Work Plans

The Sierra Club is impressed by the comprehensiveness of the various Management Strategies and associated detailed work plans. We would be interested in providing input regarding the further identification and adequate protection of Healthy Watersheds, conserving forested areas, protecting and increasing urban tree canopy, addressing climate change concerns, and reducing urban runoff. We would also seriously consider helping to hold meetings and workshops and undertaking other measures to communicate the objectives of the Program's work efforts and provide opportunities for public input.
