

Fractions of G1/G2/G3 Organics

Qian Zhang (UMCES @ CBPO)

Modeling Workgroup

04/04/2017

Conowingo Specifications

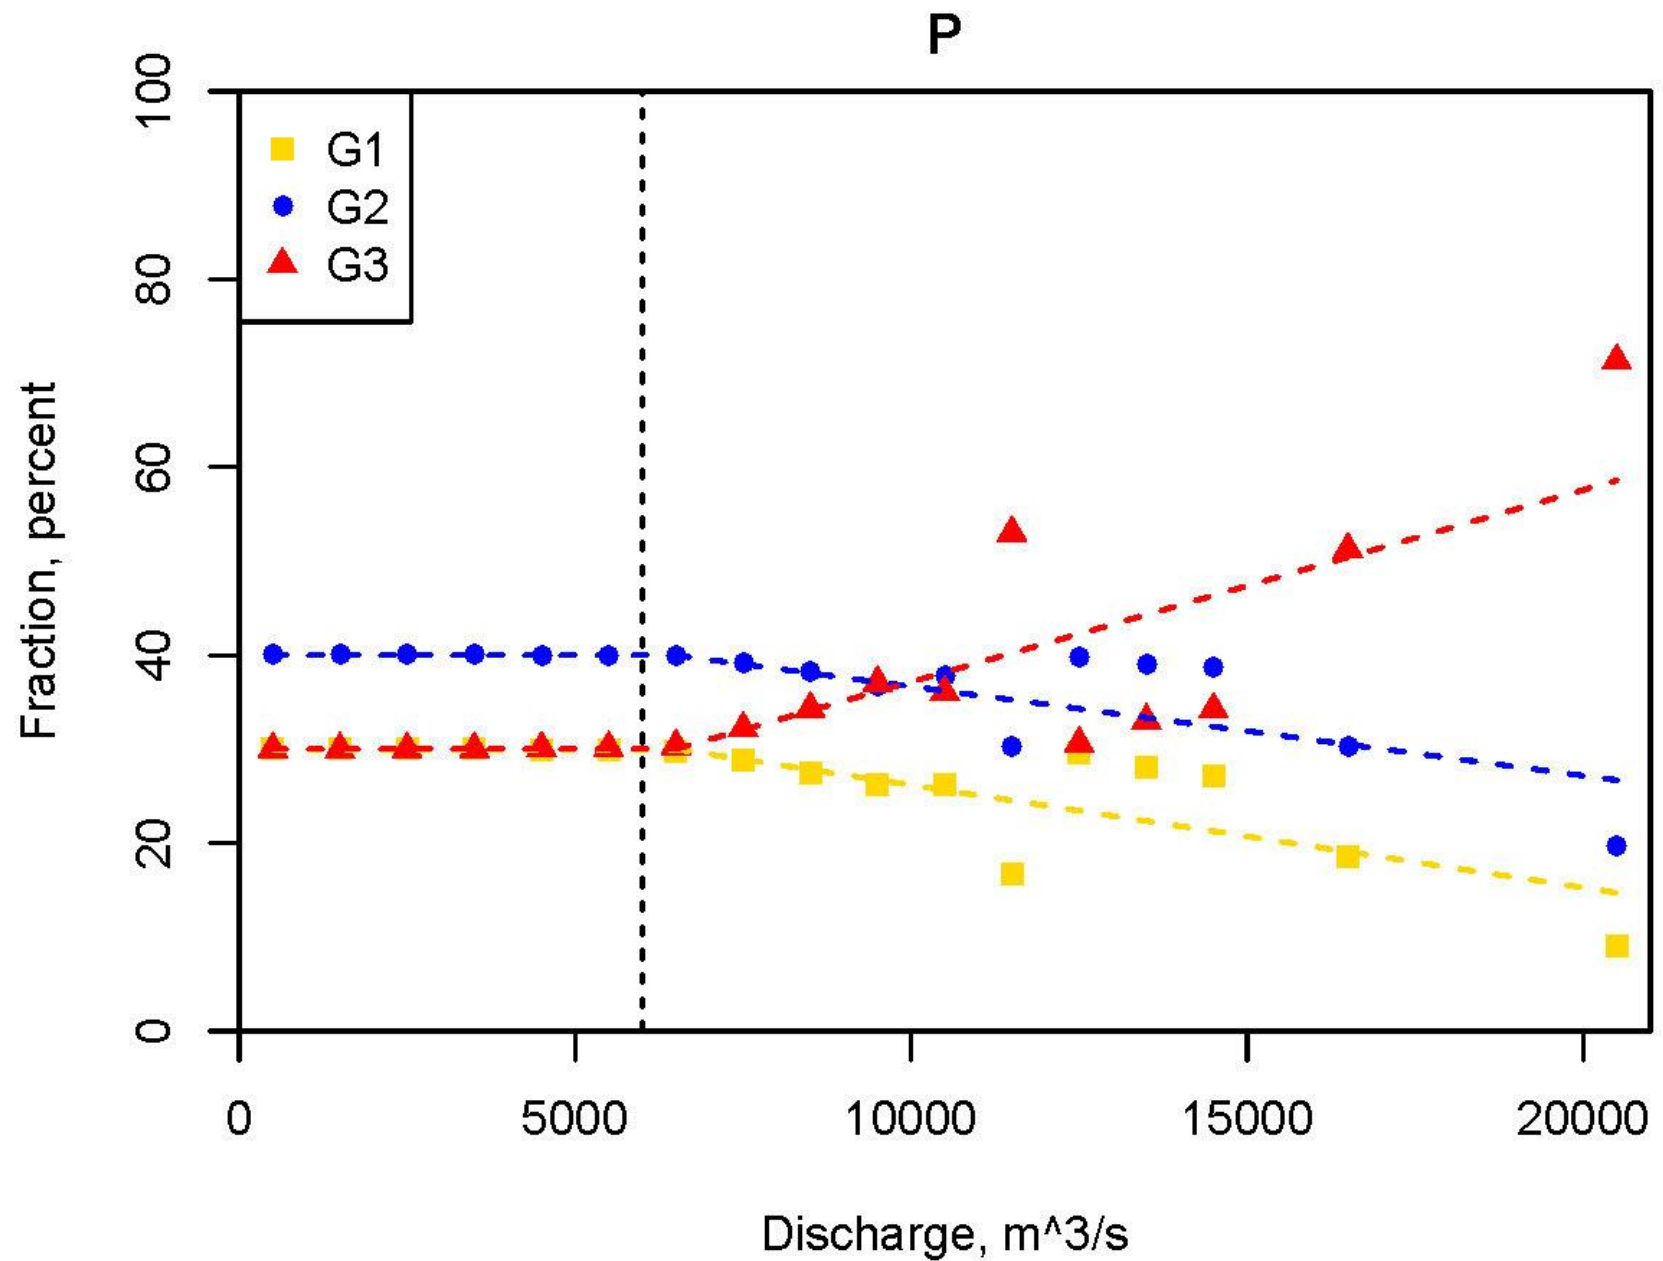

- During the 2/14/17 Modeling WG meeting agreement was reached
 - Conowingo is in equilibrium
 - WRTDS is appropriate for calibration use
 - Constant delivery factor over nutrient reduction scenarios
 - HDR model could be used to describe G1/G2/G3 organics
- Final agreement delayed until G1/G2/G3 equations could be developed.

HDR Model: G1P/G2P/G3P (1997 Bathy.)

G1/G2 fractions decrease at high flows
G3 fraction increases at high flows

G1P/G2P/G3P

G1N/G2N/G3N

G1G2G3: Equations

P	For $Q \leq 6500 \text{ m}^3/\text{s}$	For $Q > 6500 \text{ m}^3/\text{s}$
G1P, percent	30.0	$-0.00109 \cdot (Q - 6500) + 30$
G2P, percent	40.0	$-0.00095 \cdot (Q - 6500) + 40$
G3P, percent	30.0	$+0.00204 \cdot (Q - 6500) + 30$

N	For $Q \leq 6500 \text{ m}^3/\text{s}$	For $Q > 6500 \text{ m}^3/\text{s}$
G1N, percent	15.0	$-0.00075 \cdot (Q - 6500) + 15$
G2N, percent	45.0	$-0.00164 \cdot (Q - 6500) + 45$
G3N, percent	40.0	$+0.00239 \cdot (Q - 6500) + 40$
