

# Shallow water monitoring

- Various workgroups have mentioned a need for “shallow water monitoring”
- When STAR discussed this with the groups, the definition differed
  - E.g. Forage Fish is interested in shallow water forage fish species presence/abundance and nearshore habitat monitoring
  - SAV workgroup is interested in monitoring SAV at sentinel sites
- Current rotating shallow water quality monitoring program by MD and VA is finishing up recent rotation
- Interest in strategizing and coordinating water quality monitoring program with additional monitoring
