

A Phase-6 AGCHEM (*discovery*)  
Watershed Model:  
to support *climate change* studies

Gopal Bhatt  
[ gopal.bhatt@psu.edu ]

# Motivation

- There is a need for a model, which can be used for supporting research such as climate change simulation that requires a watershed model in a *discovery* mode rather than an *accounting* mode.

# Presentation Outline

- Background information on models (Phase-532, Phase-6, and Phase-6 AGCHEM)
- Simulation (baseline) Comparisons
  - Model vs. Model
  - Models vs. Observations
- Comparisons of projected changes (calibration vs. scenario)

# **1. Background Information on Models**

---

**XYZ** precipitation

Other inputs

**Phase 5.3.2**  
(AGCHEM based)

**NLDAS-2** precipitation

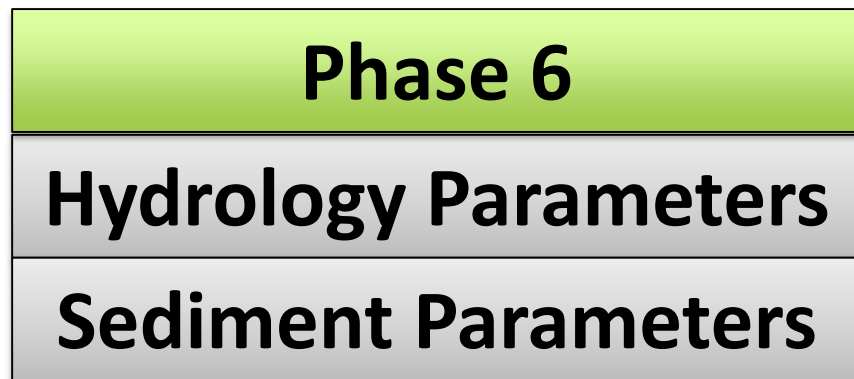

Other inputs

**Phase 6\***  
(Synthesis of multiple  
lines of evidence)

# Key Management Scenarios: Phase 532 vs. Phase 6\*

***NLDAS-2*** precipitation  
& other inputs

# What is the utility of this model?

- Use it for running climate change simulation.
- Use multiple climate change scenarios to develop multivariate regressions of marginal change in export to changes in precipitation, temperature, and potential evapotranspiration.

Given small differences in projected changes in N & P, Phase-6 AGCHEM can be used as a discovery model to provide estimates of change.

# Future Work

- Validate this analysis with a simulation of climate change scenario.
  - *Yactayo* will be putting together a 2050 scenario where NLDAS-2 data will be used as base forcing.
- 2016: Develop linkages (read sensitivity) between discovery models and the Phase 6 watershed model for accounting climate change.
