Annual P Loss Estimator (APLE) tool

- Developed by Vadas, et al. (USDA-ARS)
- Annual time step
- Edge-of-field (EOF) estimation
- Simulates sediment and dissolved P surface losses from soil, manure, and fertilizer sources
- Minimal subsurface loss or leaching to groundwater simulated

Diagram of APLE Nutrient Sources and Soil Pools

Equations to estimate Manure runoff P, Fertilizer runoff P, Sediment P loss, and Dissolved Soil P runoff

Nutrient Application Assumptions

- Application rates are user-defined by season
- Fertilizer
- Manure
 - solid or liquid forms (user-defined)
 - Direct excretion of manure (i.e. pasture) is considered a separate manure source
 - Proportioned as water-extractable P (WEP) and non-WEP

APLE Equations

- **Sediment P Loss** (kg ha^{-1}) = Eroded sediment * Soil Total P * P Enrichment Ratio
- **Manure Runoff P** (kg ha^{-1}) = WEP * Runoff/Precipitation * Distribution Factor
- **Fertilizer Runoff P** (kg ha^{-1}) = Fertilizer P * Runoff/Precipitation * Distribution Factor
- **Dissolved Soil Runoff P** (kg ha^{-1}) = Soil Labile P * 0.005 * Annual Runoff * 10^{-6}

Methodology

- The primary objective of our research is to identify, evaluate and improve the mechanics and representation of soil P as simulated within the Chesapeake Bay Watershed Model
- Using identical data provided by the CBP to estimate average EOF P loss for five land uses (*hwm*, *lwm*, *nhi*, *nlo*, and *pas*)
- LSEG county scale
- Simulation years: 1992-2005

Methodology

CATEGORY	DATA PARAMETER	UNITS	DATA SOURCE
Soil Properties	Depth of soil layer(s)	Inches	Variable based on land use
	Mehlich-3 soil P	ppm	University soil test labs
	Clay content	Percent	Chesapeake Bay Program
	Organic matter content	Percent	Chesapeake Bay Program
Transport Factors	Annual rain	Inches	Chesapeake Bay Program
	Annual runoff	Inches	Chesapeake Bay Program
	Annual erosion rate	tons acre ⁻¹	Chesapeake Bay Program
Field Properties	Field size (pasture land use only)	acres	Chesapeake Bay Program
	Annual crop P uptake	pounds acre ⁻¹	Chesapeake Bay Program
	Manure application	kg ha ⁻¹	Chesapeake Bay Program
	Manure solids	Percent	Scholarly literature
	Manure WEP/TP	Percent	Scholarly literature
	Manure incorporation	Percent and inches	Variable based on land use
	Fertilizer application	kg ha ⁻¹	Chesapeake Bay Program
	Fertilizer incorporation	Percent and inches	Variable based on land use
	Degree soil mixing	Percent	Variable based on land use

Results: annual Total P EOF losses by land use

Sediment contributions to TP loads

- **Sediment P Loss** = Eroded sediment * Soil Total P * P Enrichment Ratio
 - 97.9% of TP loads are sediment P loads for *hwm*
 - 94.7% of TP loads are sediment P loads for *lwm*
 - 85.1% of TP loads are sediment P loads for *pas*

EXTRAS

Model Validation

- P loss in runoff
 - Measured data from 28 crop studies from 13 states, Australia, and Ireland; 14 pasture studies from 5 states, Australia, and New Zealand
- Soil P dynamics
 - Measured data from 19 studies monitoring changes in soil P from 1 to 25 years
- Under all scenarios, the model was not calibrated differently
