

Chesapeake Bay Program Management Board Meeting – March 27, 2025

Outcome Disposition Meeting Consensus Results

The Chesapeake Bay Program's Management Board uses a consensus-based process for decision making ([Chesapeake Bay Program Governance Document](#), page 22). "A consensus decision-making process is a group decision-making process that not only seeks the agreement of most participants, but also the resolution or mitigation of minority objections" ([Chesapeake Bay Program Governance Document](#), page 21).

At its March 27, 2025 Outcome Disposition Meeting, the Management Board utilized the Consensus Continuum (Figure 1), described in the [Chesapeake Bay Program Governance Document](#) (page 23), and an outcome disposition agreement process (Figure 2). Management Board members submitted consensus continuum votes on behalf of their organization, agency or entity via a "pulse check" decision support tool constructed on Google Sheets. All Management Board members (voting and non-voting) were invited to participate. The results presented in this document were downloaded and summarized on March 28, 2025.

Figure 1. This presentation slide shows the Consensus Continuum utilized in the Management Board's outcome disposition votes. This Consensus Continuum was developed by University of Maryland Center for Leadership & Organizational Change and is described in the [Chesapeake Bay Program Governance Document](#) (page 23).

Outcome Disposition Agreement Process

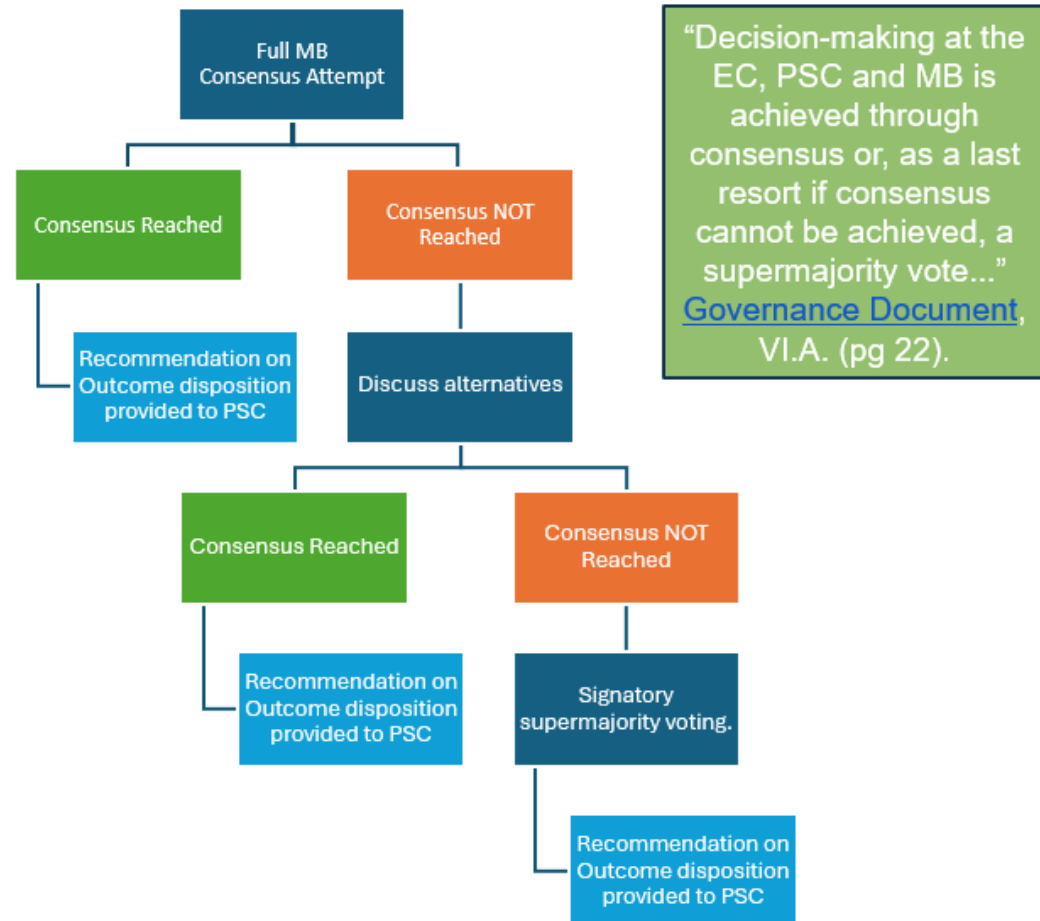

Figure 2. The outcome disposition process steps employed by the Management Board included an attempt at full consensus, discussion of alternatives, and if consensus could not be achieved, signatory supermajority voting. Consensus was reached for all outcome dispositions. Signatory supermajority voting was not utilized. For additional details on this process, please see the [Consensus Agreement Process](#) presentation.

NOTE: Tree Canopy and Forest Buffers

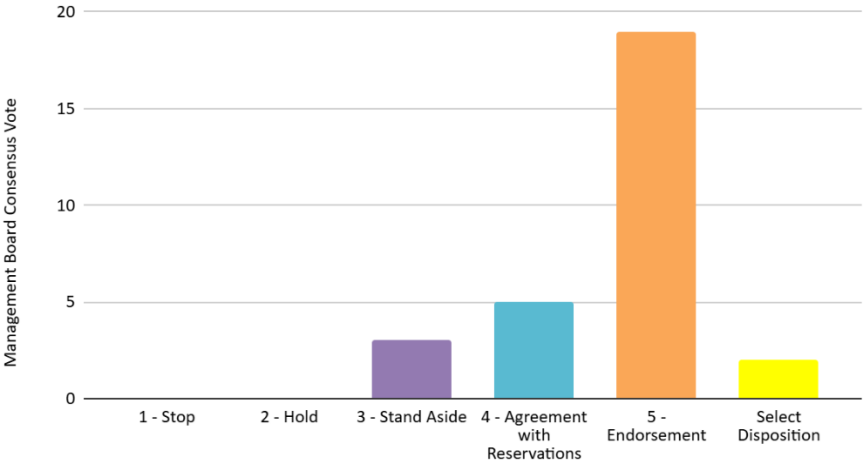

The MB recognizes the importance of and supports maintaining an emphasis on Tree Canopy and Forest Buffers. The MB directs the Forestry Workgroup to consider how we can broaden and better highlight opportunities for forest conservation and restoration. The Forestry Workgroup will consider if consolidation or reclassification under a single outcome makes sense, with the inclusion of distinct Tree Canopy and Forest Buffers targets. This discussion will be revisited on April 10, 2025.

NOTE: Monitoring and Assessment

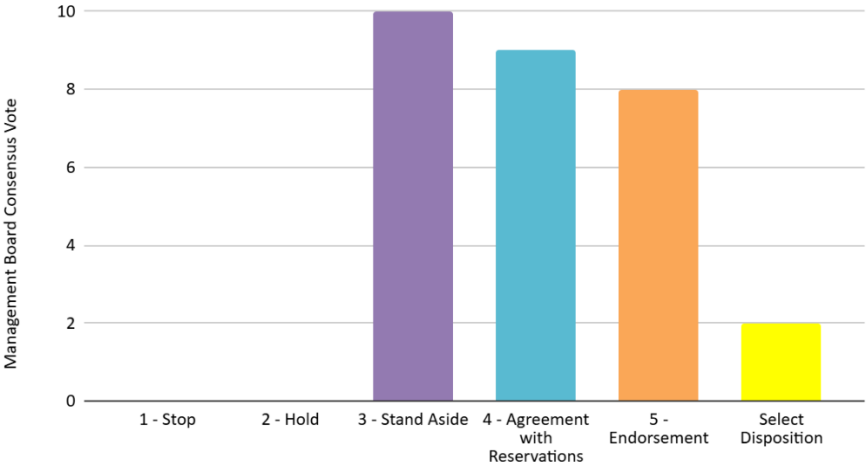

The MB recognizes that a framework for changing environmental conditions is an important aspect of managing our outcomes; this should be reflected in our work. A framework for changing environmental conditions should be developed and implemented across the partnership, but may not be an outcome. The MB will discuss how this framework can be lifted up into practice across the partnership.

Land Use Options Evaluation & Healthy Watersheds

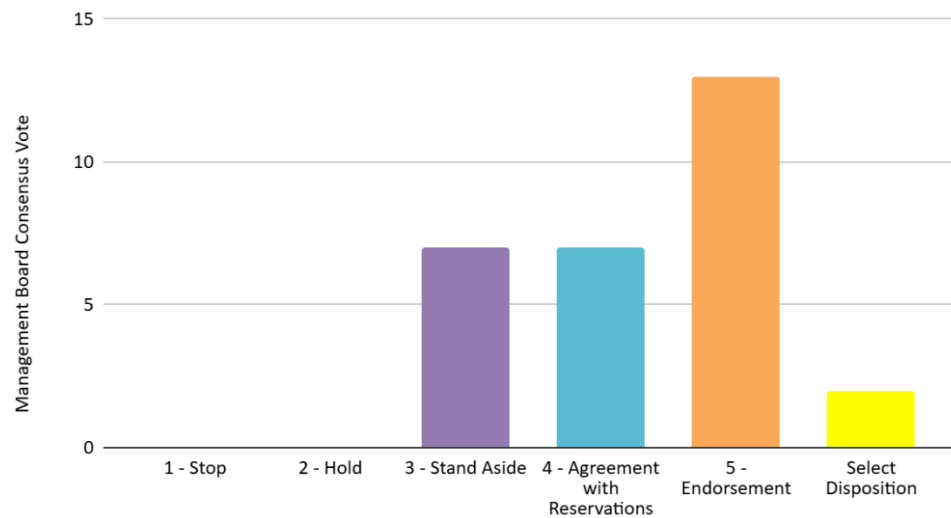

The MB appreciates the work that the GIT has put into redeveloping its recommendations and supports the outcome dispositions proposed by the GIT. The MB reserves the prerogative to pursue structure conversations and decisions outside of the GIT's recommendations to ensure that watershed health maintains the appropriate focus within the partnership. The MB may make recommendations related to Goals, but ultimately defers to the PSC's authority.

Brook Trout, Stream Health, Fish Passage and Nontidal Fish Habitat

Management Board members have reached consensus with the following considerations, but have different opinions on the merits of combining, reclassifying, and/or updating Brook Trout, Stream Health, Fish Passage, and the proposed Nontidal Fish Habitat as unique outcomes. Among a variety of points discussed, members noted that combining outcomes creates risks related to public perception and the alienation of partners. Other members noted that not combining outcomes has risks associated with partner capacity to support work towards accomplishing the outcomes, the effective allocation of resources, and the opportunity to work more strategically.

GIT leadership and signatory MB members who have participating members in these outcomes, along with their practitioners, will convene with as many attendees as is feasible to discuss synergies and alignments between the Brook Trout, Stream

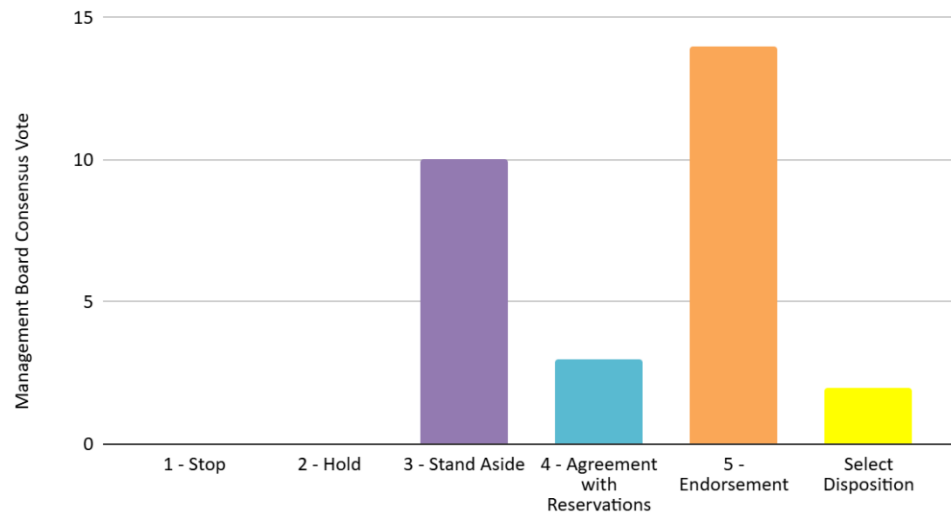

Health, Fish Passage, and the proposed Nontidal Fish Habitat Outcomes before the April 10, 2025 MB meeting. The Habitat GIT will convene this conversation with support from the Chesapeake Bay Commission and the Commonwealth of Pennsylvania, including utilizing a Pennsylvania facilitator. The Management Board also seeks PSC feedback related to the disposition of these outcomes.
