

## Option #1: Add Forage and Fish Habitat Action Teams

These action teams would not be permanent workgroups, but rather temporary action teams tasked with developing the management strategies for the forage and fish habitat outcomes. After management strategy development, the Fisheries GIT could determine if a permanent workgroup is needed.

## Option #2: Add Forage and Fish Habitat Action Teams and Fisheries Science Committee

The Forage and Fish Habitat Action Teams would operate as stated in Option #1. The Fisheries Science Committee would be a permanent advisory group for the full Fisheries GIT, workgroups and action teams. The Fisheries Science Committee would be product-driven and respond to specific product development, review requests, etc. from the full GIT or any workgroup/action team. The Committee would be comprised of a broad range of expertise to address multiple species and ecosystem topics.

## Option #3: Fisheries Ecosystem Workgroup

The Fisheries Ecosystem Workgroup (FEW) would be reborn as an overarching permanent workgroup to address ecosystem topics as they arise. The workgroup could form temporary action teams to address specific issues/products such as the Forage and Fish Habitat management strategies.
