

Water Quality Goal Implementation Team

List of Needs

Directions: Please choose a priority ranking of high, medium, or low for the following needs that you would like STAR support. Add additional needs that are not listed as well. STAR is especially interested in metric development and monitoring needs that are not currently being addressed.

High	Identification of main indicators of outcome success (numerous metrics exist currently).
Medium	Better define the lag time between implementing practices and relationship with water-quality and SAV response.
Choose an item.	Discussion: Is STAR providing the needs of the WQGIT, using monitoring data and trend analysis, for the Mid-Point Assessment (MPA)?
Choose an item.	Other.
Choose an item.	Other.

Additional Information:

The last priority is something that STAR is already doing under the midpoint assessment. The lag time issue is important, but should not take resources away from those other MPA-related priorities that have already been identified and agreed to by the WQGIT and larger partnership.
