

Nontidal Network  
WG is moving to a  
new home!

NTN WG

# Updated Agreement, revised management structures are underway

## The Four Interconnected Goals of Watershed Restoration

# NTN WG has a new home: Clean Water Goal Team

- 2014-2025. NTN WG lived in the Scientific Technical Assessment and Reporting Team
- 2026 and beyond: NTN WG will have a home in the Clean Water Goal Team, one of 4 (down from 6) Goal Teams in the new CBP Structure.

**The Four Interconnected Goals of Watershed Restoration**

# Impact on our world? Some positives

- Greater exposure and visibility on a regular basis for our work and our networks
- Greater emphasis on data and data stories expected. (This group has spent most of the last decade focused on watershed modeling and BMP accounting.)

**The Four Interconnected Goals of Watershed Restoration**

# Impact on our world? Some positives

- Expanding use of our data:
  - e.g. USGS Robin Glas involved in support for key decision foundations of “hydrologic period” and “critical period” decisions for the new Phase 7 Chesapeake Bay model supporting updated nutrient and sediment allocation frameworks of the watershed jurisdictions.
- Informing and educating managers as we interact with new people across the watershed.
  - CBP has a new director, relatively new assistant director, there are new goal team leads, a lot of new faces and minds to work with.
