AMT Planning

1/9/2026

Tom Butler, EPA

Timeline 2026

January 9th
- Nutrient applications

February 13th AND 27th
- Nutrient applications
- Broilers
- **End of decision making**

Beyond February
- Review input data
- Outputs as available

What is the goal of planning?

Model outputs are available AFTER calibration

We will likely see some unexpected outputs

Finding the cause will be time intensive

Understanding trends before we see results will **reduce time diagnosing unexpected outputs**.

What do meetings look like past February?

Monthly

- Caveat – cancelled if there is no topic

Different focus

- Comprehensive view of input data trends
  - How do animal populations, yields, fertilizer, manure look relative to each other?

NOT making decisions

PREPARING to be nimble when evaluating model results

Goal for today: Brainstorm

Brainstorm

- Most effective plan to review inputs
- What areas should we focus on

Discussion:

- Do people want to keep meeting?
- What formats do we want to see data in?
  - Raw trends?
  - Lbs/yield unit?
- Specific focus areas?
  - Geographies?
    - County, state
  - Livestock?
  - Crops?
