“SAV” THE BAY: ACHIEVING THE CHESAPEAKE BAY
PROGRAM’S SUBMERGED AQUATIC VEGETATION (SAV)
RESTORATION GOALS THROUGH LAW

*James Duffy**

I. INTRODUCTION	668
II. SUBMERGED AQUATIC VEGETATION IN THE CHESAPEAKE BAY	671
A. Ecology of SAV in the Chesapeake Bay	671
B. Historic Acreage and Distribution of SAV in the Chesapeake Bay	673
C. Administrative Responses to SAV Losses	675
III. THE ROLE OF LAW IN SAV MANAGEMENT	677
A. Ecosystem Management Principles for SAV Management	678
B. Policymakers Can Improve Protective SAV Management Through Revisions and Innovations in Federal and State Law	679
1. Strengthening Protective SAV Management Under the Clean Water Act, Section 402	681
2. Improving Protective SAV Management Under Clean Water Act, Section 404	684
3. Expanding Protective SAV Management Under Maryland’s Fisheries Laws	688
C. State and Local Policymakers Can Implement Restorative SAV Management Through Regulations Addressing Existing Technical, Political, and Organizational Barriers	692
1. Law Addressing Technical Barriers to Restorative SAV Management	693
2. Law Addressing Political Barriers to Restorative SAV Management	694
3. Law Addressing Organizational Barriers to Restorative SAV Management	696
IV. CONCLUSION	698

Duffy, J. (2024) “SAV” the Bay: Achieving the Chesapeake Bay Program’s Submerged Aquatic Vegetation (SAV) Restoration Goals Through Law, U. Balt. L. Rev. 53, 667 (2024).

ScholarWorks [here](#).

Ecosystem Function	Ecosystem Service
Food sources for waterfowl, plankton, and macroinvertebrates	Coastal habitats that support biodiverse, stable fisheries and wildlife
Physical cover and protection for aquatic species in shallow tributaries	
Oxygenation of water through photosynthetic processes	
Uptake of nutrients like nitrogen and phosphorous	Prevention of algal blooms and dead zones
Dissipation of wave energy	Prevention of shoreline erosion
Absorption of carbon dioxide through photosynthetic processes	Buffer for excess blue carbon

**Single species or sector
EBM**

Or

**Multiple species or
sectors EBM**

Or

EBM of the entire system

Protective SAV Management Implicates Federal and State Regulatory Frameworks

Framework	Actor(s)	Function	Suggestions
Clean Water Act, Section 402 (33 U.S.C 1311)	<ul style="list-style-type: none"> - U.S. Environmental Protection Agency - Md. Department of the Environment 	To preserve water quality and limit point and nonpoint source pollution	<ol style="list-style-type: none"> 1. Improve funding for water quality assessments and monitoring 2. Value ecosystem services
Clean Water Act, Section 404 (33 U.S.C. 1344)	<ul style="list-style-type: none"> - U.S. Environmental Protection Agency - U.S. Army Corps of Engineers - Md. Department of the Environment 	To preserve water quality and limit dredging and filling activities	<ol style="list-style-type: none"> 1. Expand protections for special aquatic areas to include water-dependent activities 2. Pursue higher mitigation ratios and banking for open water wetlands
Md. Fisheries Laws (Md. Code Ann., Nat. Res. et seq.)	<ul style="list-style-type: none"> - Md. Department of Natural Resources 	To sustainably manage fisheries and prevent depletion	<ol style="list-style-type: none"> 1. Expand SAV protection zones in northern regions of the estuary

The Law Must Address Technical, Political, and Structural Barriers to Restorative SAV Management

Category	Challenges	Potential Solutions	Actor(s)
Technical	<ul style="list-style-type: none"> - Labor - Expenses - Monitoring capabilities 	Increased funding for monitoring agencies and projects	State policymakers, MDE and DNR managers
Political	<ul style="list-style-type: none"> - Salience of SAV loss 	Increased opportunities for engagement with SAV, such as participatory-science	The public, DNR managers, DNR scientists
Structural	<ul style="list-style-type: none"> - Baywide issue demanding local management solutions - Local, state, and federal coordination required 	State-managed, locally-implemented mitigation requirements for coastal activities impacting SAV	State policymakers, local policymakers, DNR and CAC managers

A photograph of a calm body of water, likely a creek or lake. In the foreground, there are dense, green, feathery plants (wild celery) growing in the water. The water is still, reflecting the sky and the surrounding greenery. In the background, there is a dense line of trees and a small patch of reeds or tall grasses on the shore. The sky is blue with some light clouds.

Questions and feedback welcome.

Thank you for your time!
