

# 4-Dimensional interpolation tool for dissolved oxygen in Chesapeake Bay

Breck Sullivan<sup>4</sup>,  
Rebecca Murphy<sup>1</sup>, Elgin Perry<sup>2</sup>, Jon Harcum<sup>3</sup>, Peter Tango<sup>4</sup>

<sup>1</sup>UMCES at CBP, <sup>2</sup>Statistics Consultant, <sup>3</sup>Tetra Tech,  
<sup>4</sup>USGS at the CBP

STAR Meeting  
August 28, 2025

*This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. The information is provided on the condition that neither the U.S. Geological Survey nor the U.S. Government shall be held liable for any damages resulting from the authorized or unauthorized use of the information.*

What makes the  
tool 4-D?

# Space

# Time

# Spatial & Temporal

3-D + 1-D = 4-D

# Create a 3D representation of D0 through time (4D)

3/1/2024 Midnight

3/1/2024 1am

...

8/01/2025 11pm

# What is interpolation?

# Interpolation makes a prediction inside your data to fill gaps

3/1/2024 Midnight

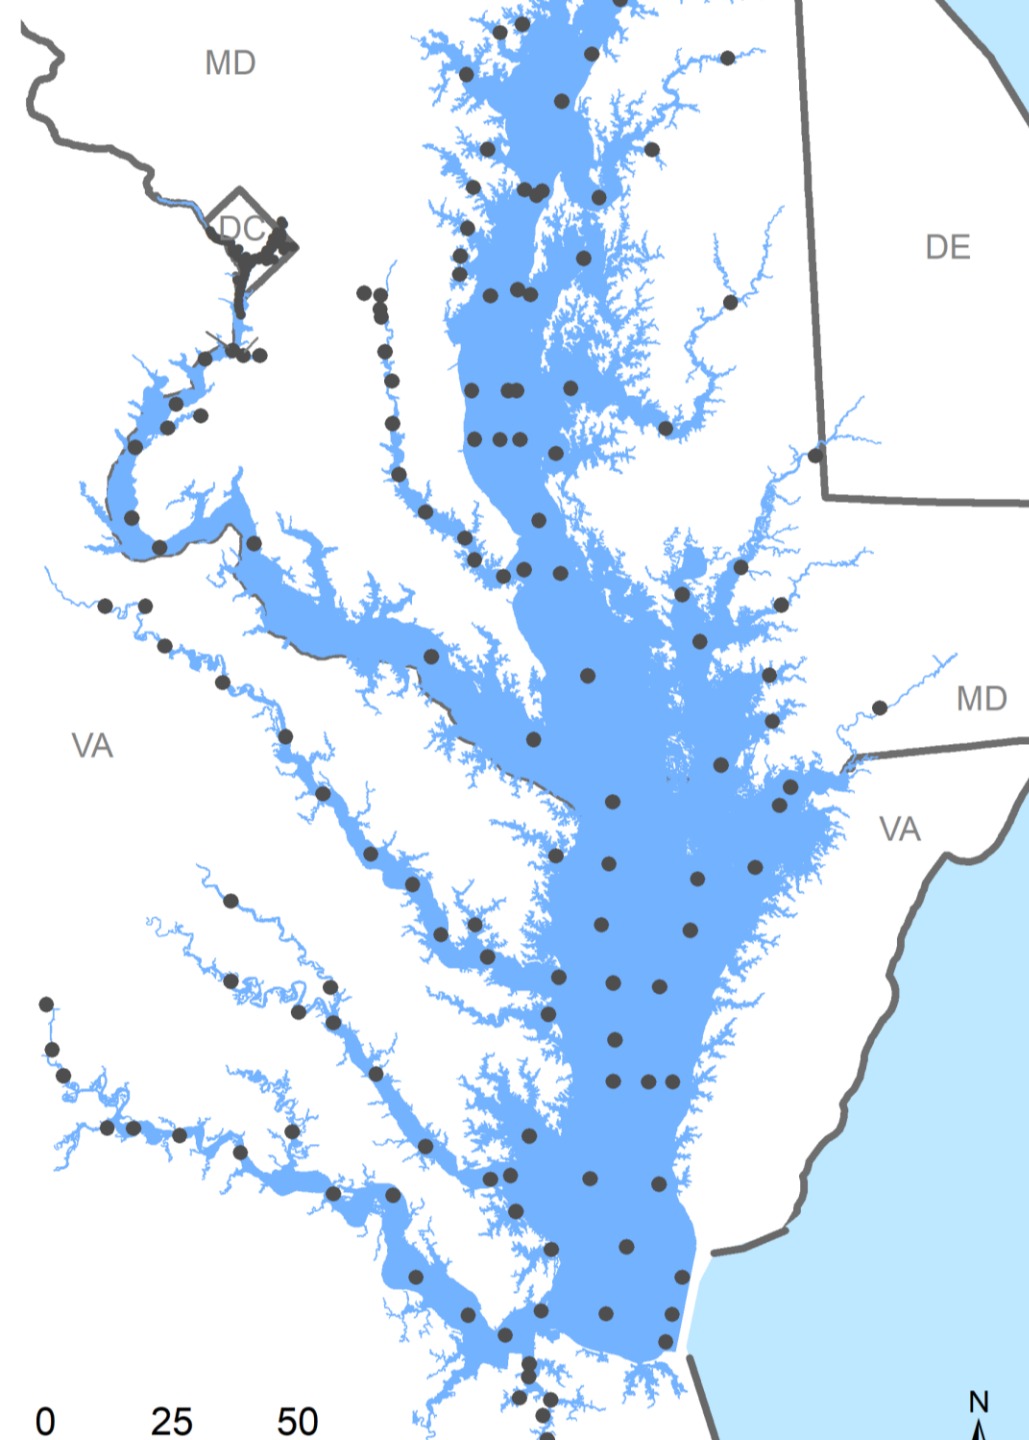

3/1/2024 1am

8/01/2025 11pm

Why does the  
partnership need a  
4-D tool?

There cannot be monitoring everywhere:

- Funding constraints
- Timing/travel logistics

# Monitoring

## Water Quality Criteria

# Purpose: Build a tool for more complete criteria assessment

*Dissolved oxygen (DO) criteria that currently can be evaluated with existing approaches and data*

**Table 1.** Chesapeake Bay dissolved oxygen criteria.

Designated Use	Criteria Concentration/Duration	Protection Provided	Temporal Application
Migratory fish spawning and nursery use *	7-day mean $\geq 6$ mg liter <sup>-1</sup> (tidal habitats with 0-0.5 ppt salinity)	Survival/growth of larval/juvenile tidal-fresh resident fish; protective of threatened/endangered species.	February 1 - May 31
	Instantaneous minimum $\geq 5$ mg liter <sup>-1</sup>	Survival and growth of larval/juvenile migratory fish; protective of threatened/endangered species.	
	Open-water fish and shellfish designated use criteria apply		June 1 - January 31
Shallow-water bay grass use	Open-water fish and shellfish designated use criteria apply		Year-round
Open-water fish and shellfish use	30-day mean $\geq 5.5$ mg liter <sup>-1</sup> (tidal habitats with 0-0.5 ppt salinity)	Growth of tidal-fresh juvenile and adult fish; protective of threatened/endangered species.	Year-round
	30-day mean $\geq 5$ mg liter <sup>-1</sup> (tidal habitats with >0.5 ppt salinity)	Growth of larval, juvenile and adult fish and shellfish; protective of threatened/endangered species.	
	7-day mean $\geq 4$ mg liter <sup>-1</sup>	Survival of open-water fish larvae.	
	Instantaneous minimum $\geq 3.2$ mg liter <sup>-1</sup>	Survival of threatened/endangered sturgeon species. <sup>1</sup>	
Deep-water seasonal fish and shellfish use	30-day mean $\geq 3$ mg liter <sup>-1</sup>	Survival and recruitment of bay anchovy eggs and larvae.	June 1 - September 30
	1-day mean $\geq 2.3$ mg liter <sup>-1</sup>	Survival of open-water juvenile and adult fish.	
	Instantaneous minimum $\geq 1.7$ mg liter <sup>-1</sup>	Survival of bay anchovy eggs and larvae.	
	Open-water fish and shellfish designated-use criteria apply		October 1 - May 31
Deep-channel seasonal refuge use	Instantaneous minimum $\geq 1$ mg liter <sup>-1</sup>	Survival of bottom-dwelling worms and clams.	June 1 - September 30
	Open-water fish and shellfish designated use criteria apply		October 1 - May 31

\*Note a 30-day mean 6 mg/L MSN value is evaluated for purpose of the WQ indicator.

<sup>1</sup> At temperatures considered stressful to shortnose sturgeon (>29°C), dissolved oxygen concentrations above an instantaneous minimum of 4.3 mg liter<sup>-1</sup> will protect survival of this listed sturgeon species.

# Dissolved Oxygen data sets

Bi-weekly long-term sampling (DOEE, MDDNR, VADEQ, CBP)

Dataflow (MDDNR and VECOS)

From <http://vecos.vims.edu/>

Shallow water continuous monitoring (MDDNR and VECOS)

From <http://vecos.vims.edu/>

From <https://eyesonthebay.dnr.maryland.gov/>

New continuous vertical arrays (NOAA & CBP)

<https://www.chesapeakebay.net/who/group/hypoxia-collaborative-team>

And more:  
Citizen  
science,  
riverkeepers,  
and research  
data sets

A map of Virginia is shown in the background, with a light beige overlay in the center. The overlay contains the text "IT'S TIME TO BREAK DOWN THE TOOL!". The map features blue water bodies, black dots representing locations, and a network of brown lines representing roads or rivers. The letters "VA" are visible in the bottom right corner of the map area. Dark blue L-shaped bars are positioned on the left and right sides of the central text area.

IT'S TIME TO BREAK  
DOWN THE TOOL!

## New method

## Daily D0 estimates

**Mid-day space-  
and-time  
interpolation**

3/1/2024

3/2/2024

...

8/1/2025

## Hourly estimates

**Within day  
(cyclic)  
interpolation**

3/1/2024 Midnight

3/1/2024 1am

8/1/2025 11pm

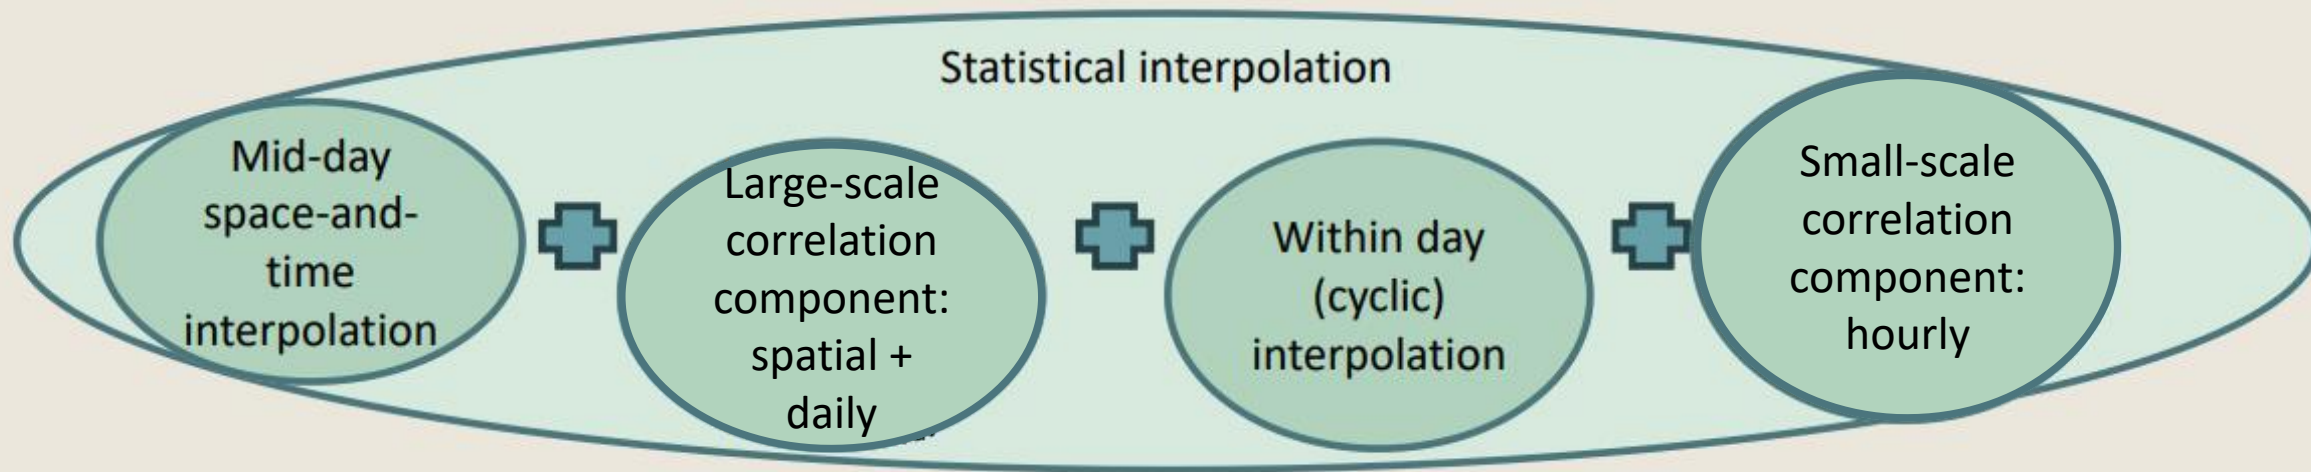

## Estimates to show variations

Large-scale  
correlation  
component:  
spatial +  
daily

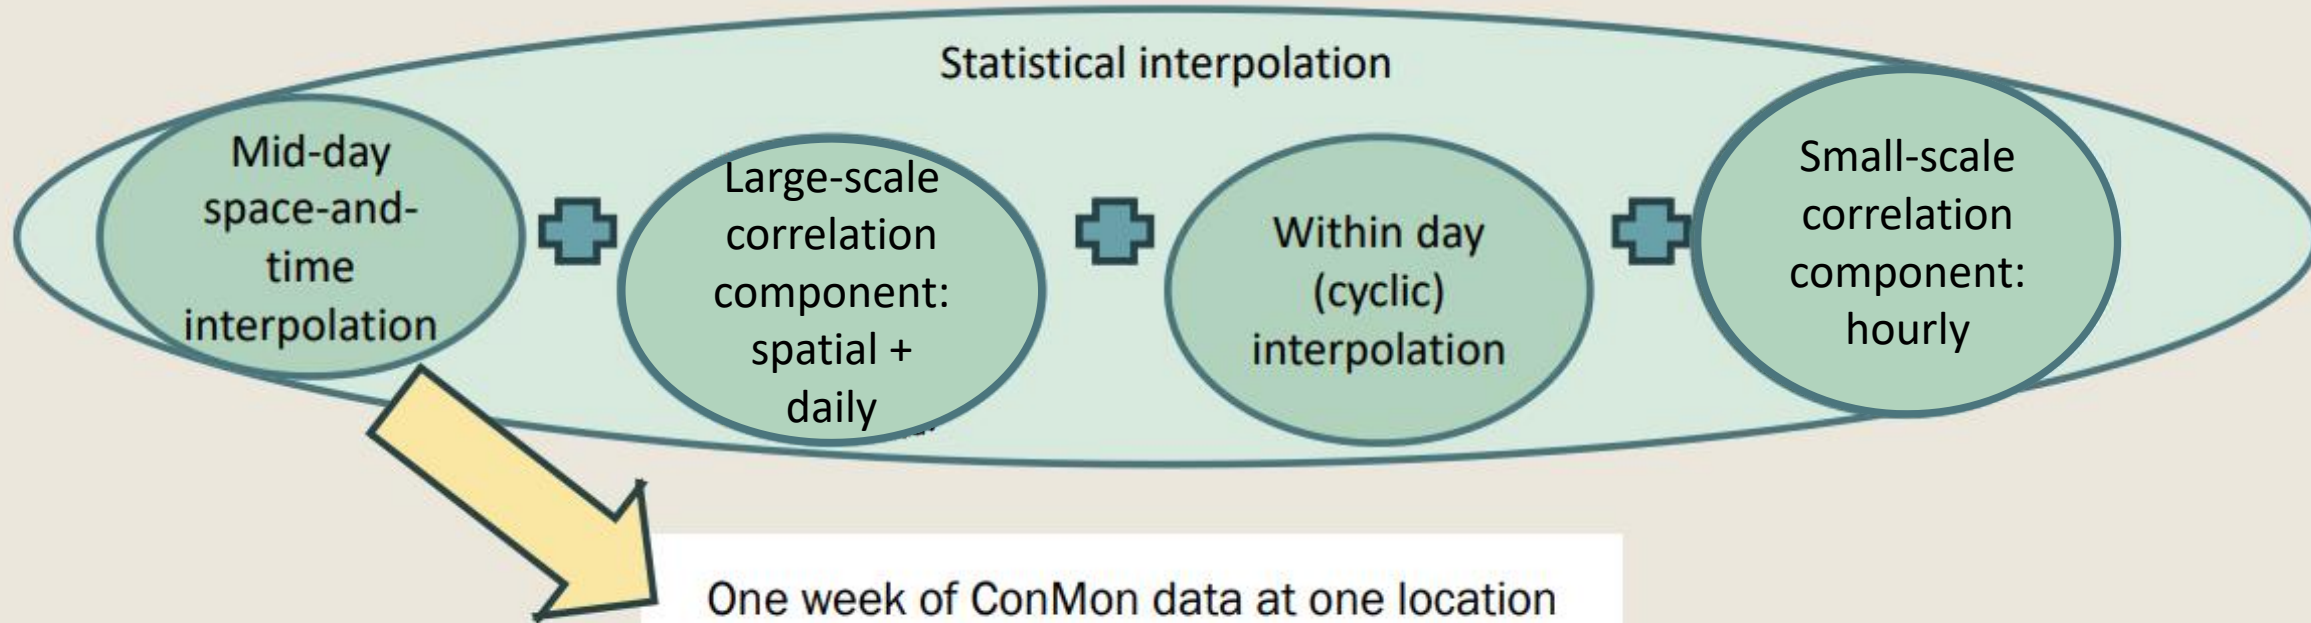

Small-scale  
correlation  
component:  
hourly

One week of ConMon data at one location

**Mid-day interpolation:**

Represents the gradual decrease observed in the data over this week.

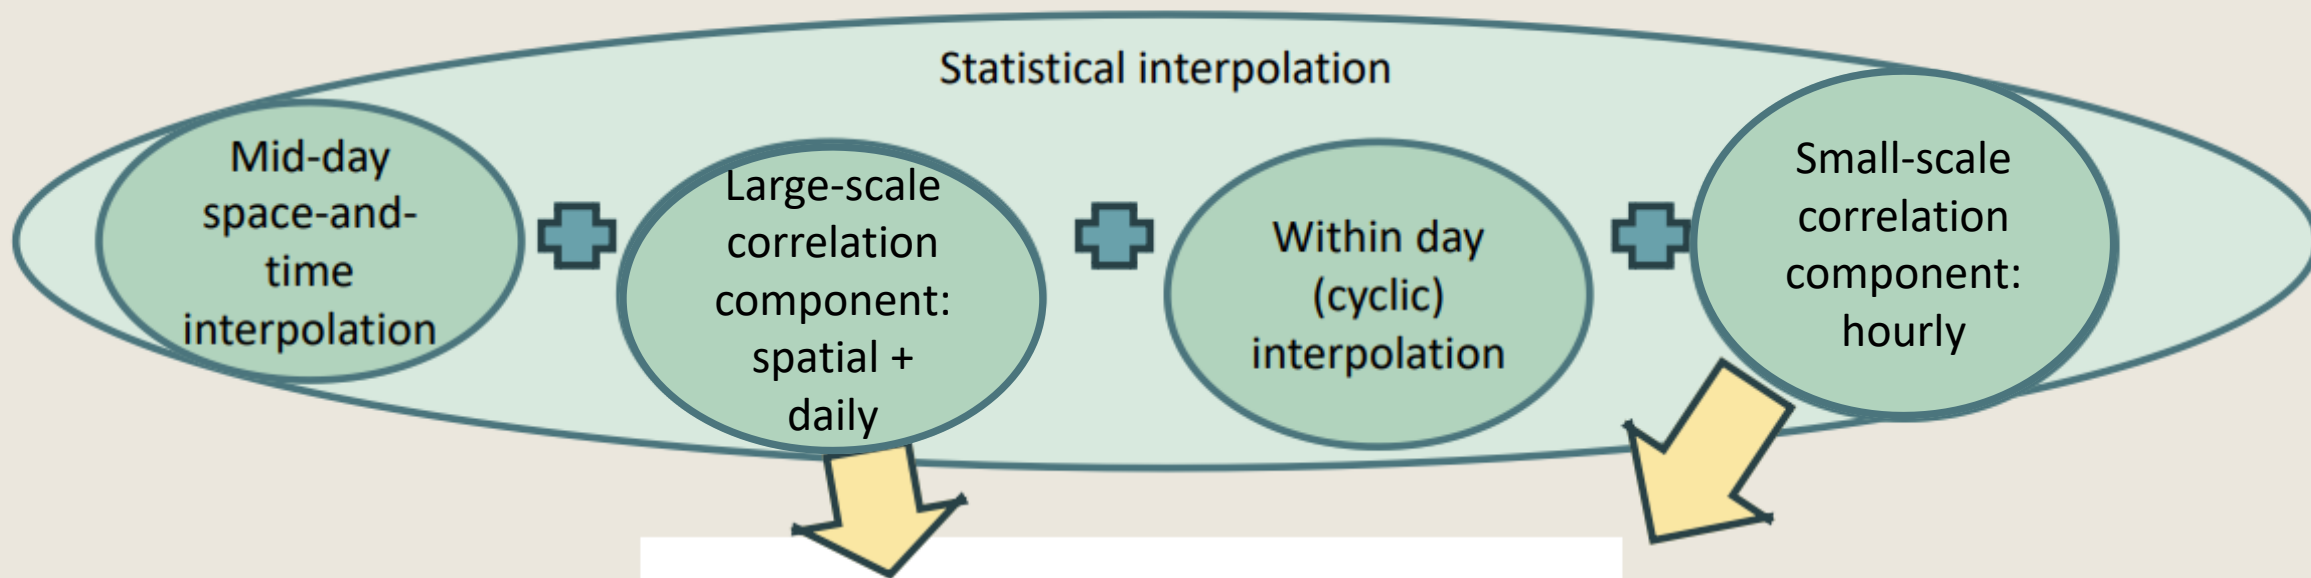

One week of ConMon data at one location

Within day (cyclic) interpolation:

Added to the daily interpolation and represents the diel and tidal cycles (*in practice, cycles will vary daily and by location*)

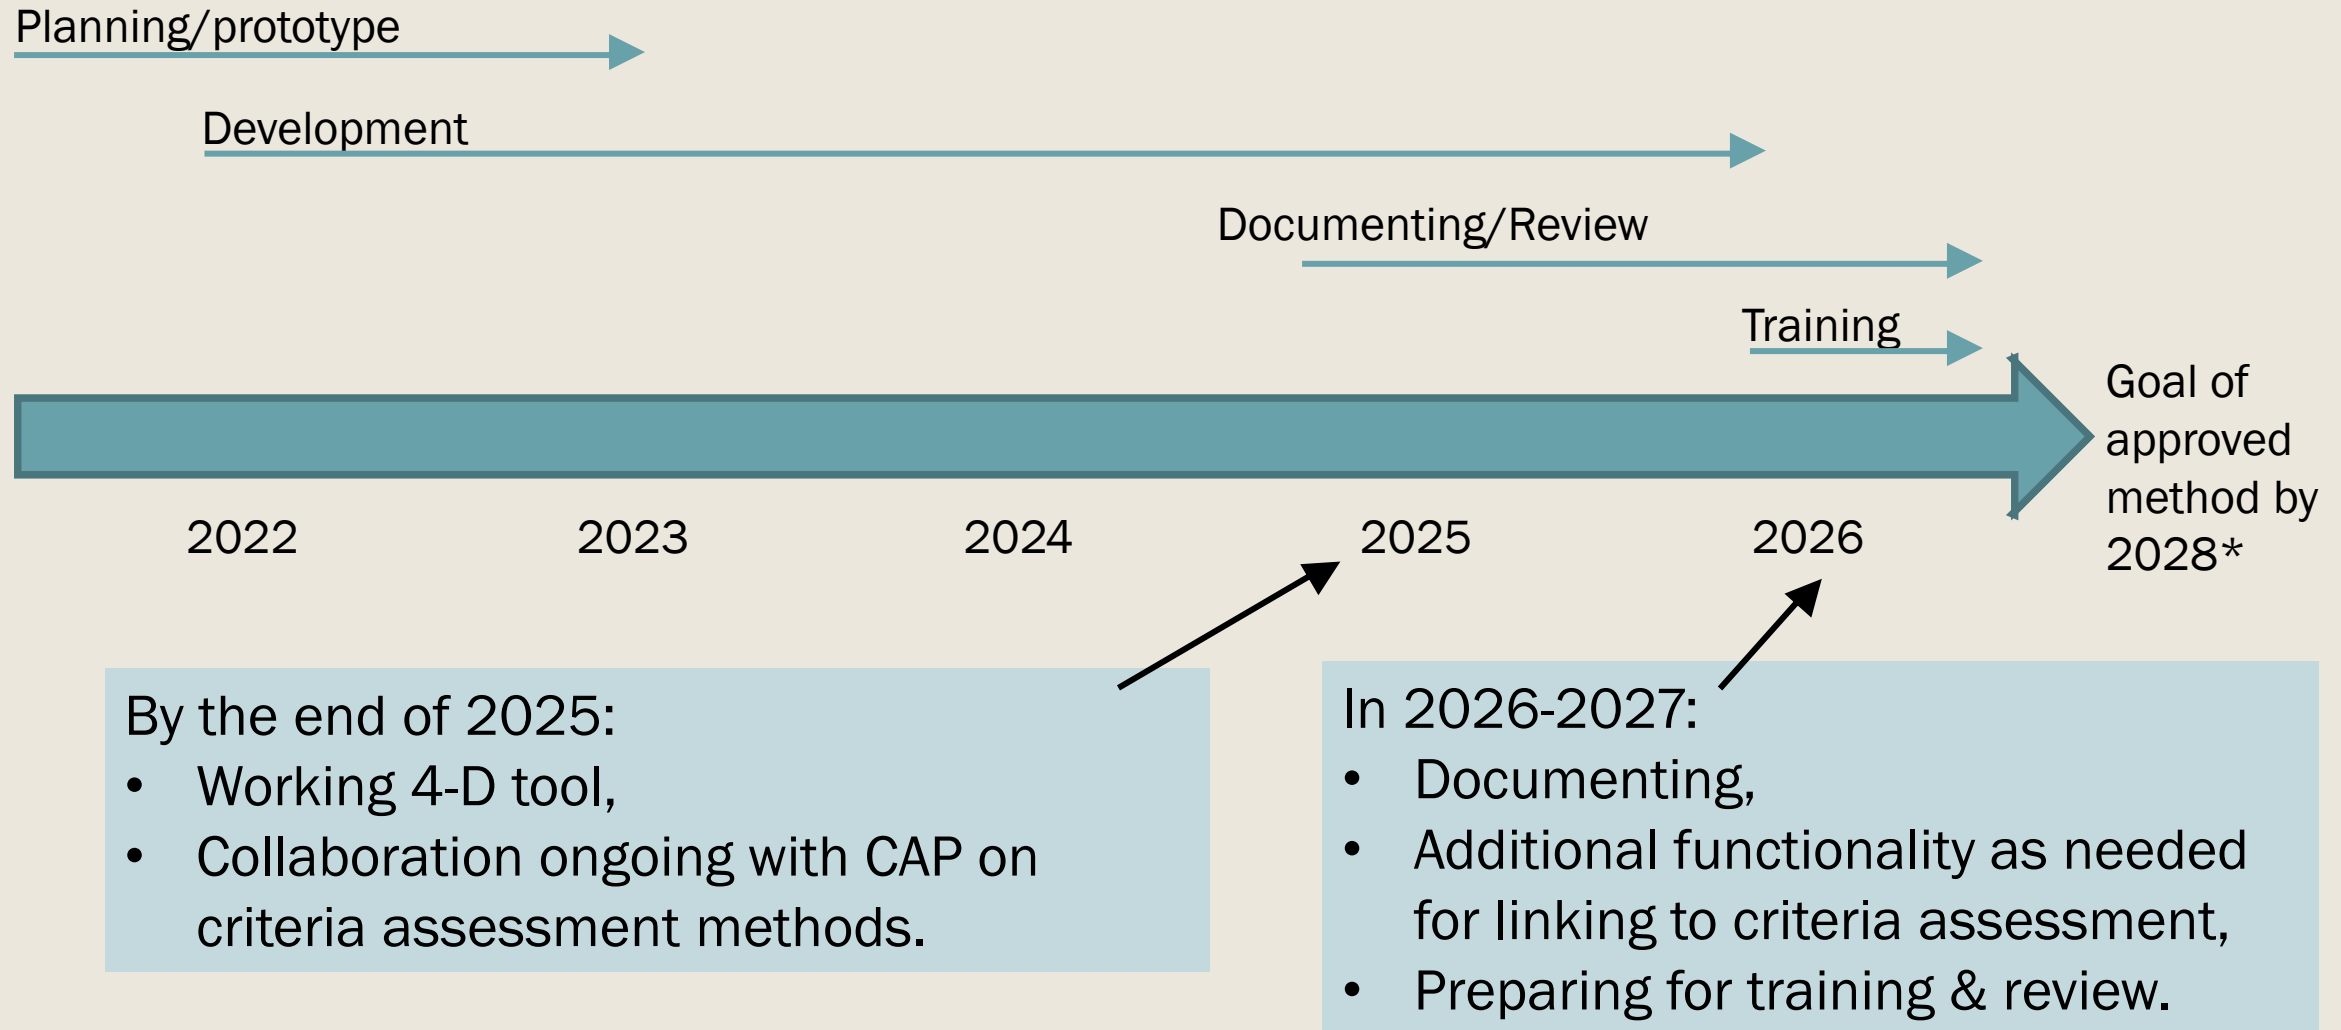

One week of ConMon data at one location

**Multiple realizations:**  
Correlation components  
provide multiple  
realizations.

# 4-D interpolator development timeline

\*with 2030 goal of reporting on all criteria
