Updates to Modeled Sewer and Septic for the Phase 7 Watershed Model

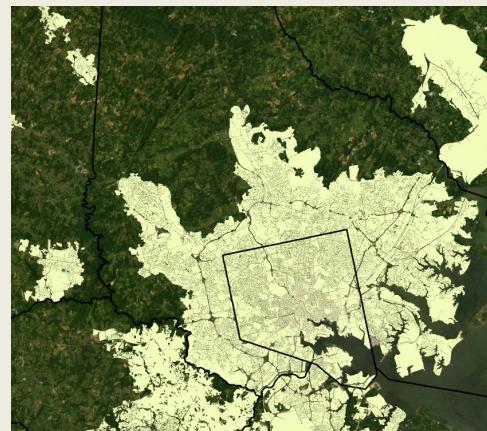

Wastewater Treatment Workgroup Meeting

January 22, 2026

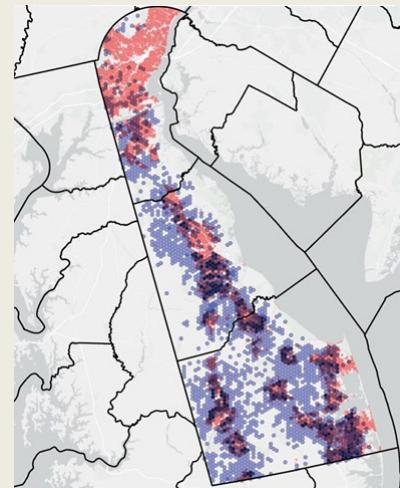

Jackie Pickford, Peter Claggett, Michelle Katoski, Labeeb Ahmed, Sarah McDonald, USGS-CBPO

Background/Context

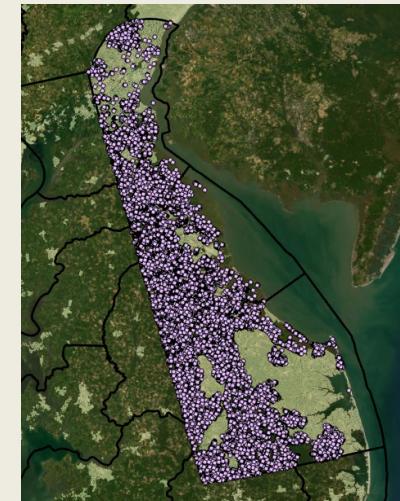

The USGS models septic system counts and populations served by sewer and septic within the Chesapeake Bay Watershed from 1985 through future years (e.g., 2050) to inform the Chesapeake Bay Watershed Model and CAST.

Sanitary Sewer
Service Area

Chesapeake Bay Land
Change Model
(CBLCM)

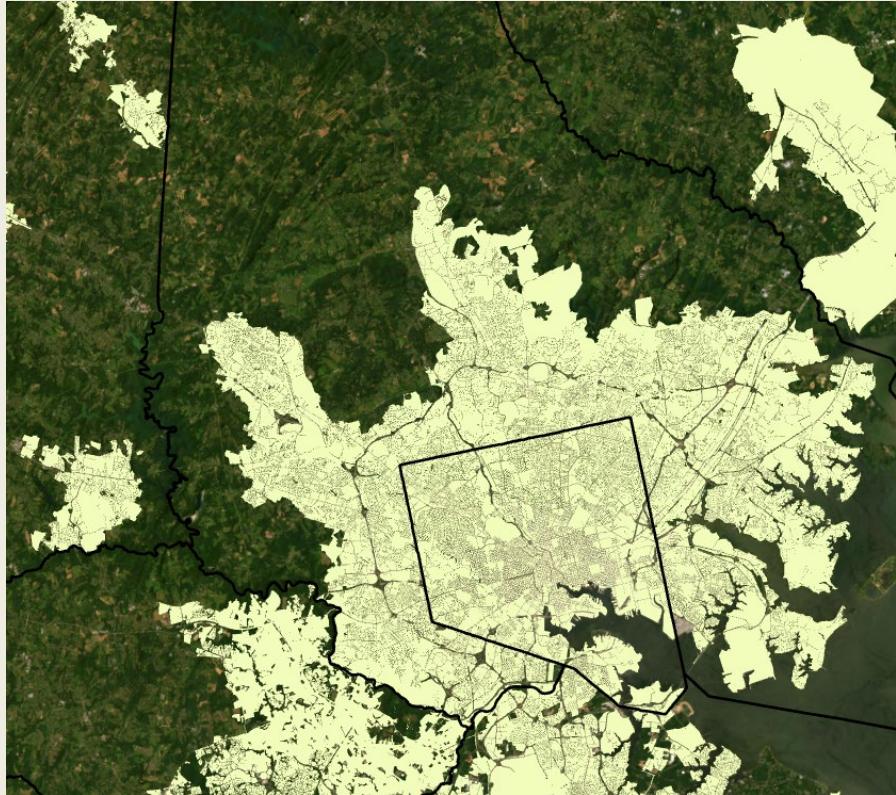

Sewer/Septic Model

Phase 7 Watershed
Model/CAST

Approvals from the WWTWG in July 2025

1. Approved Phase 7 sanitary sewer service area.

2. Approved the updated methods for the sewer/septic model.

Updates to Methods since Sept 2025

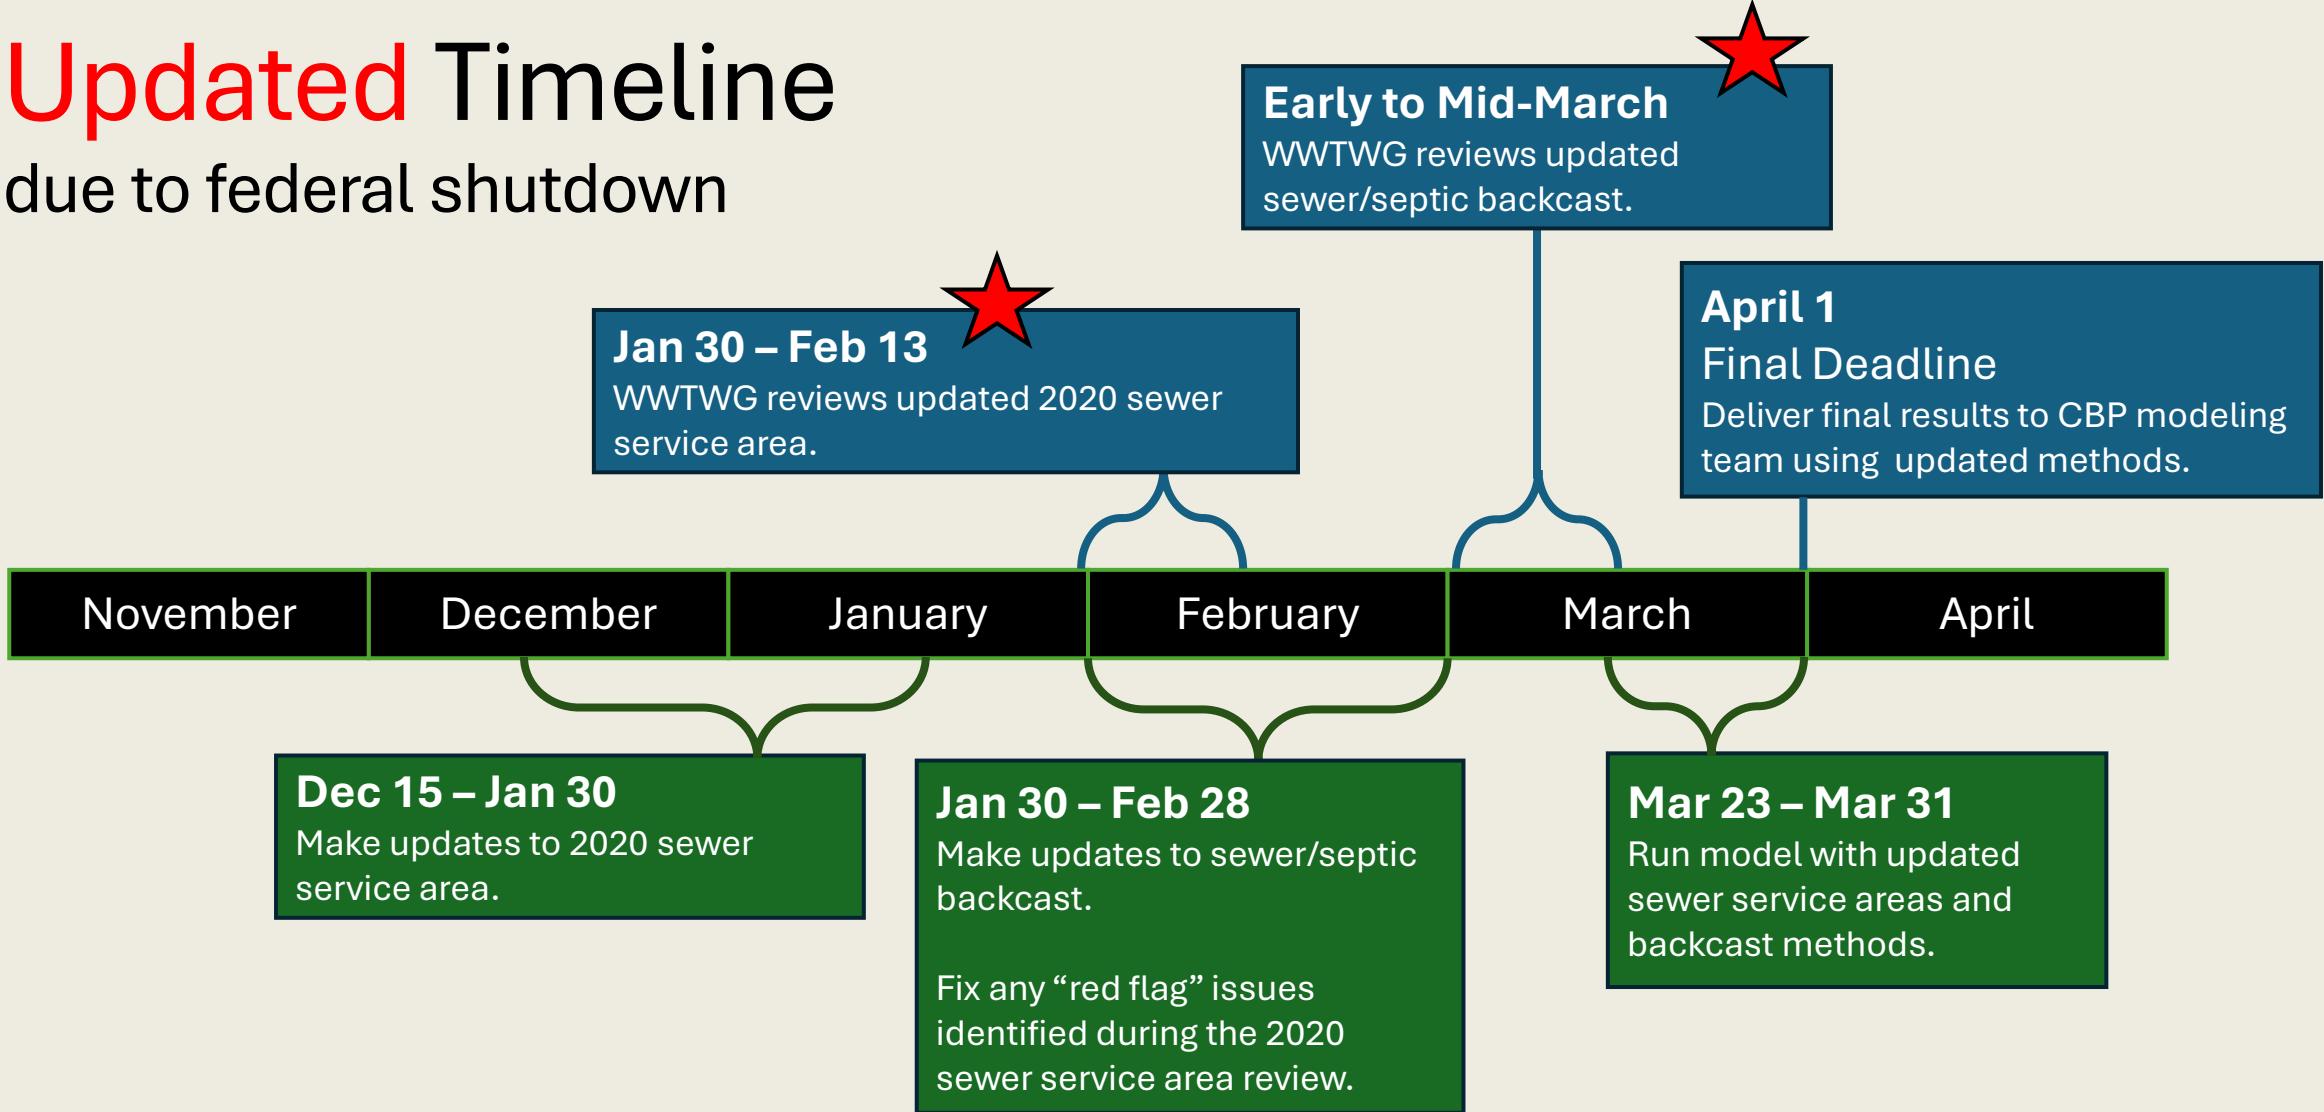

I. Slight improvements to the 2020 sewer service area

- I. Incorporation of sewer data provided by some jurisdictions that missed the original submission deadline
- II. Adjustments to fix overestimation of septic systems adjacent to the sewer service area
- III. Adjustments to fix overestimation of septic systems in census places

II. Updates to sewer/septic backcast

-  I. Incorporation of a 1990, 2000, & 2010 sewer service area to better account for changes in sewered area over time **(February – March)**

Updated Timeline due to federal shutdown

WWTWG review

Updates to the 2020 Sewer Service Area

Update I:
Incorporation of new sewer service area data

Updated sewer
data for the
following
jurisdictions

Hampton Roads, Virginia

Amelia County, Virginia

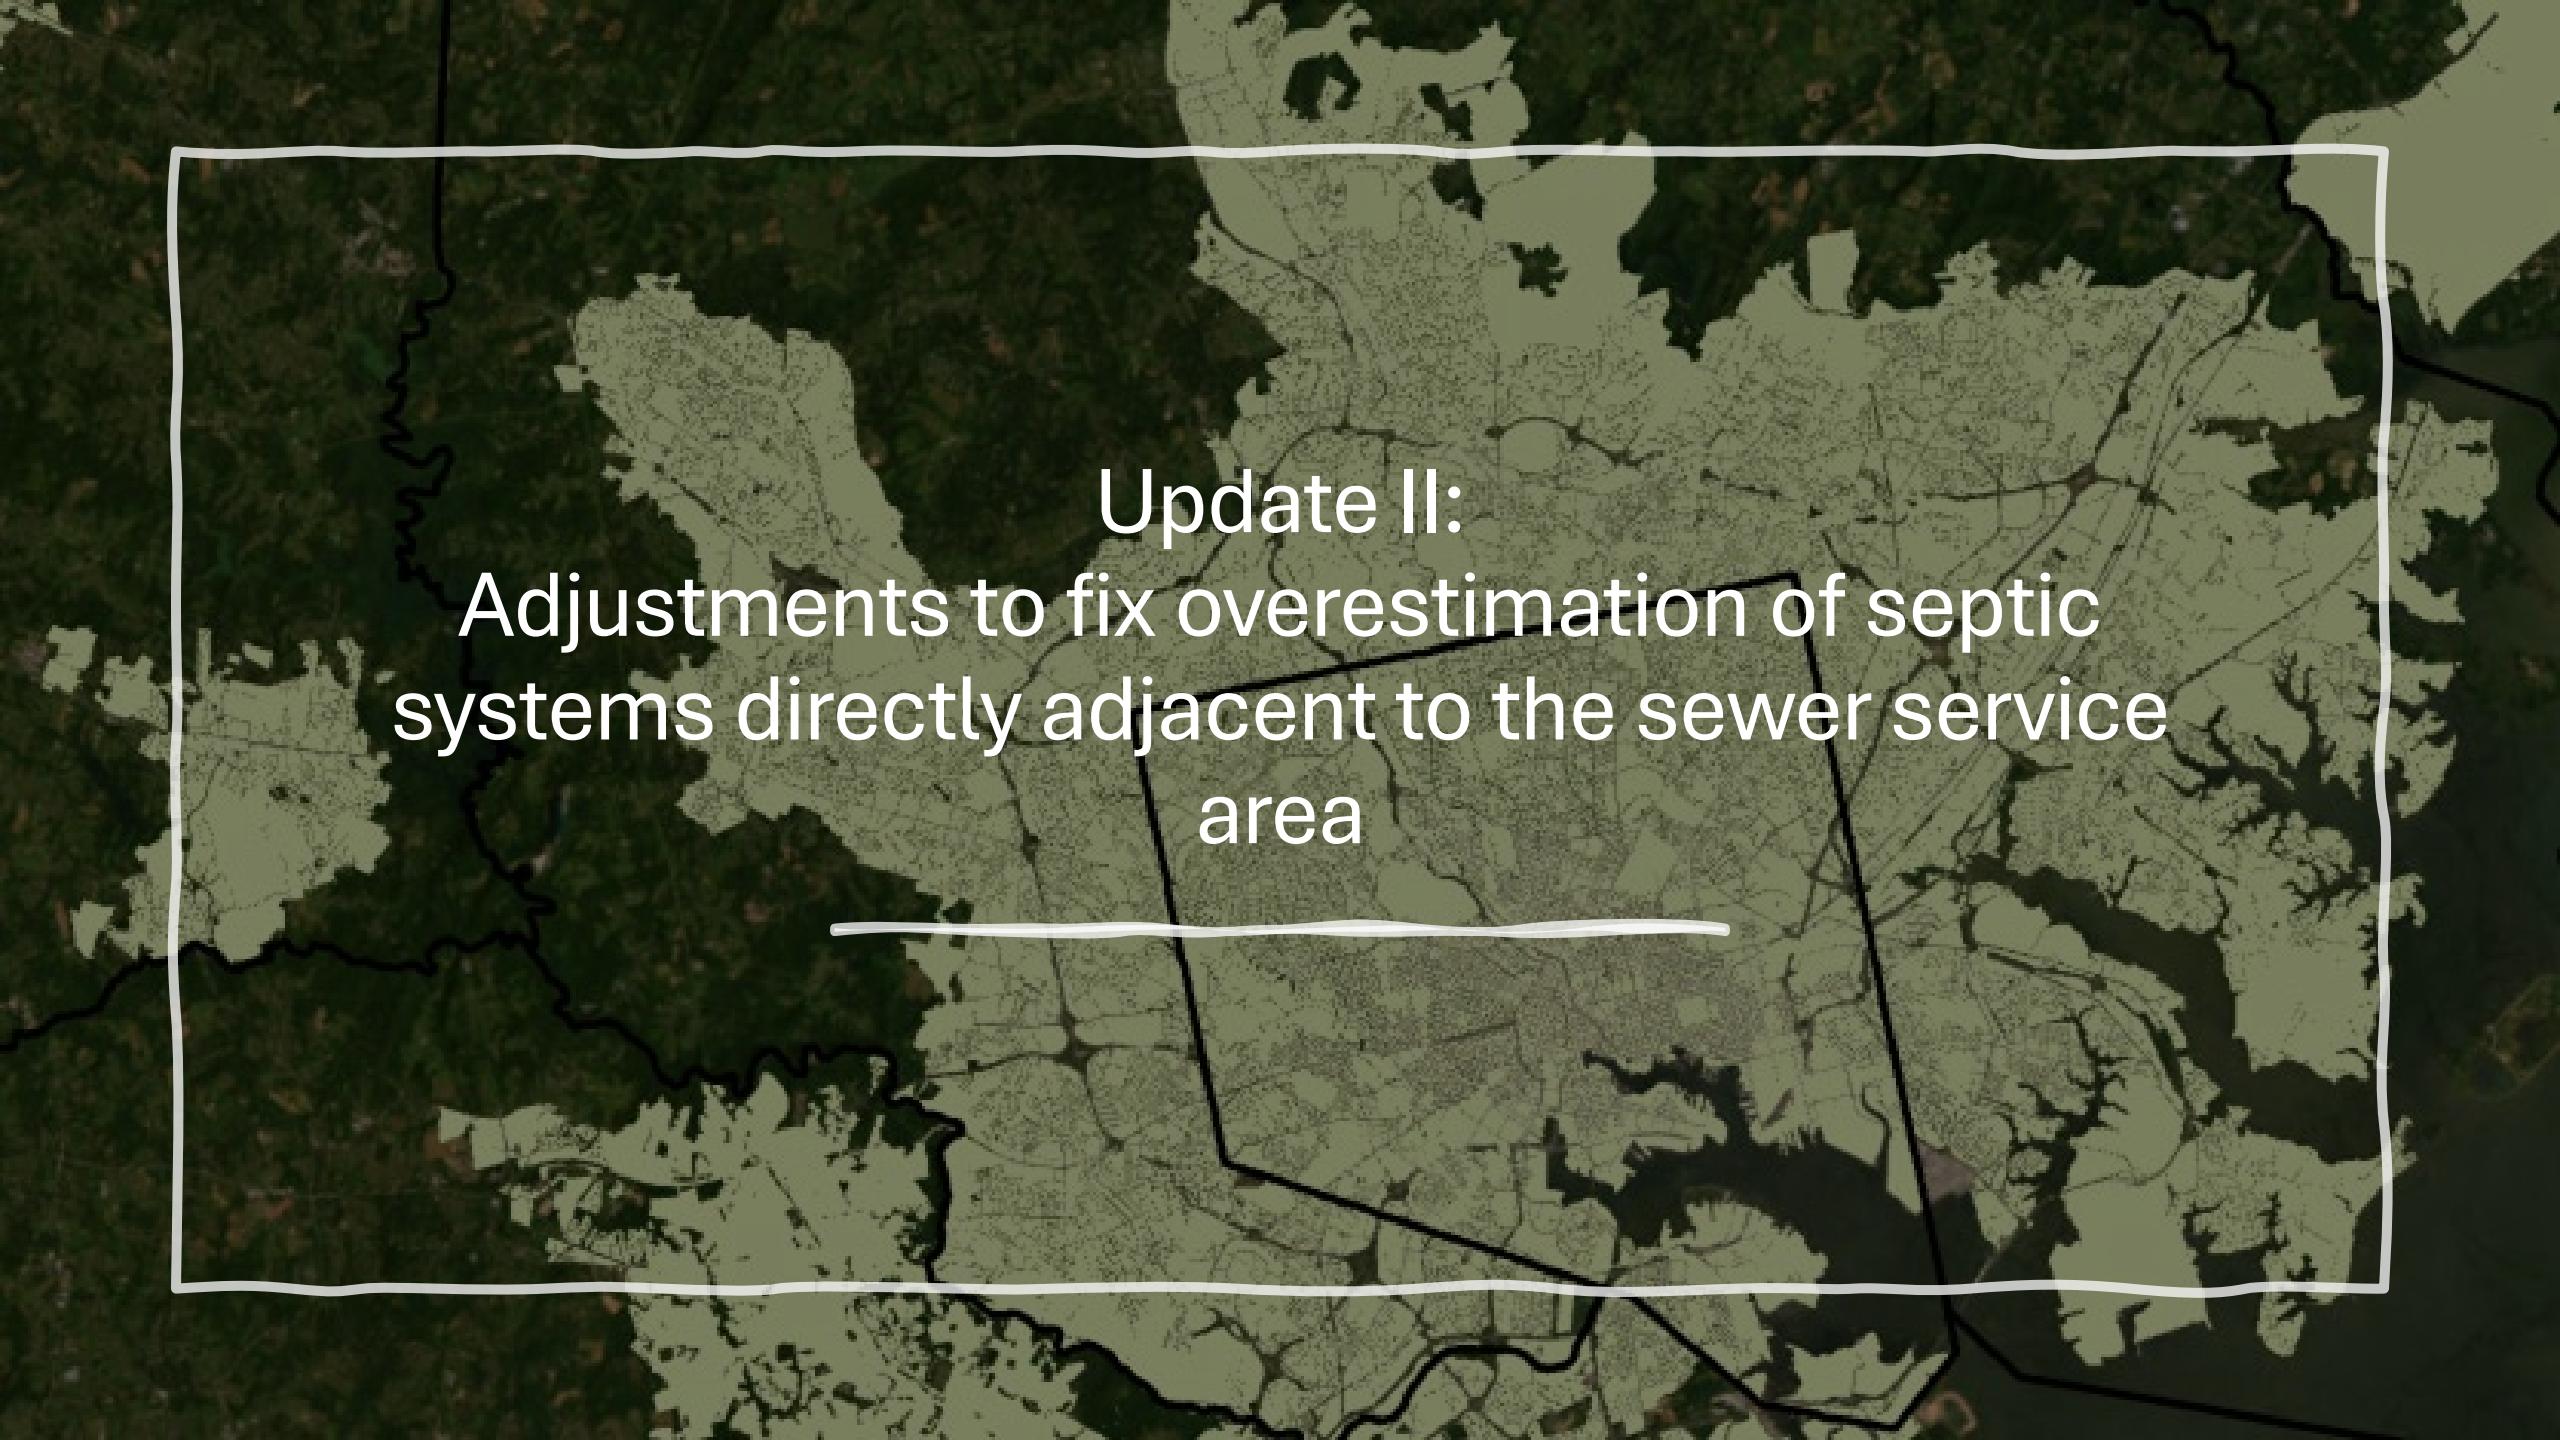

Culpeper County, Virginia

Blair County, Pennsylvania

Perry County, Pennsylvania

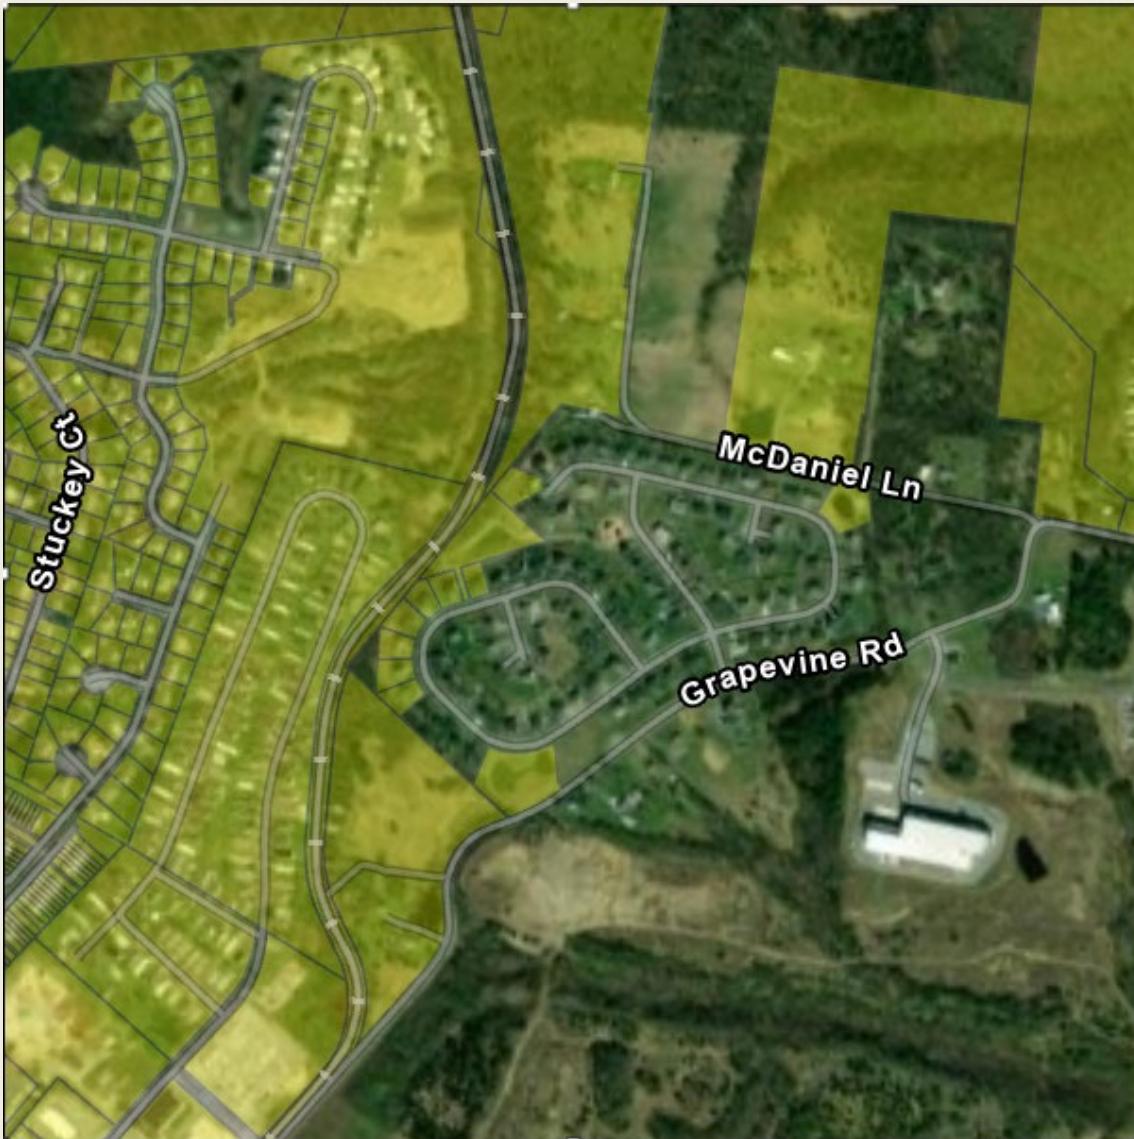

Centre County, Pennsylvania

Sussex County, Delaware

Update II:
Adjustments to fix overestimation of septic
systems directly adjacent to the sewer service
area

Berkeley County, West Virginia

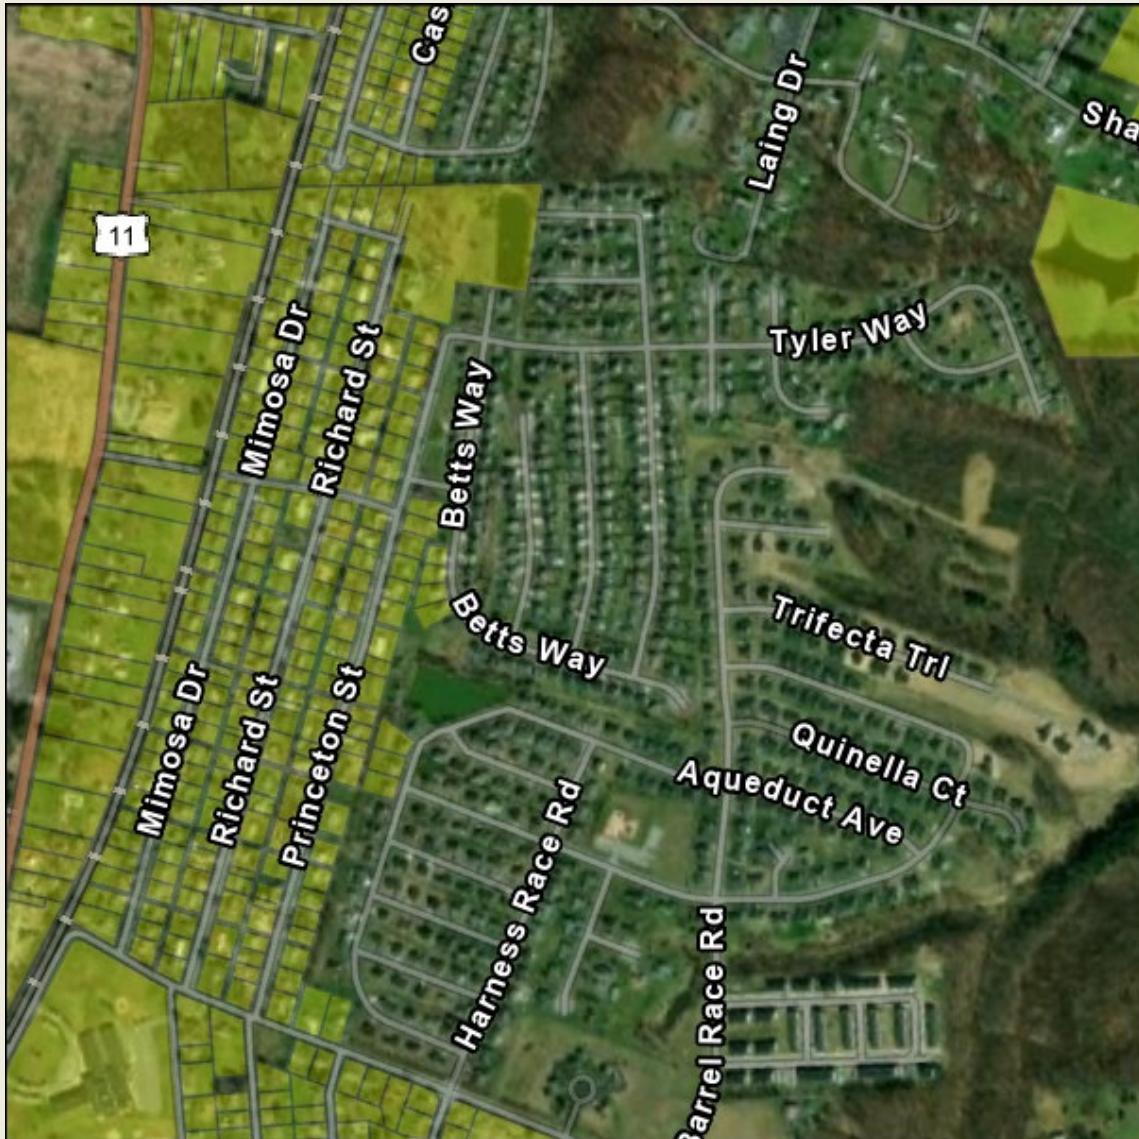

= original P7 sewer layer

= updates to the P7 sewer layer

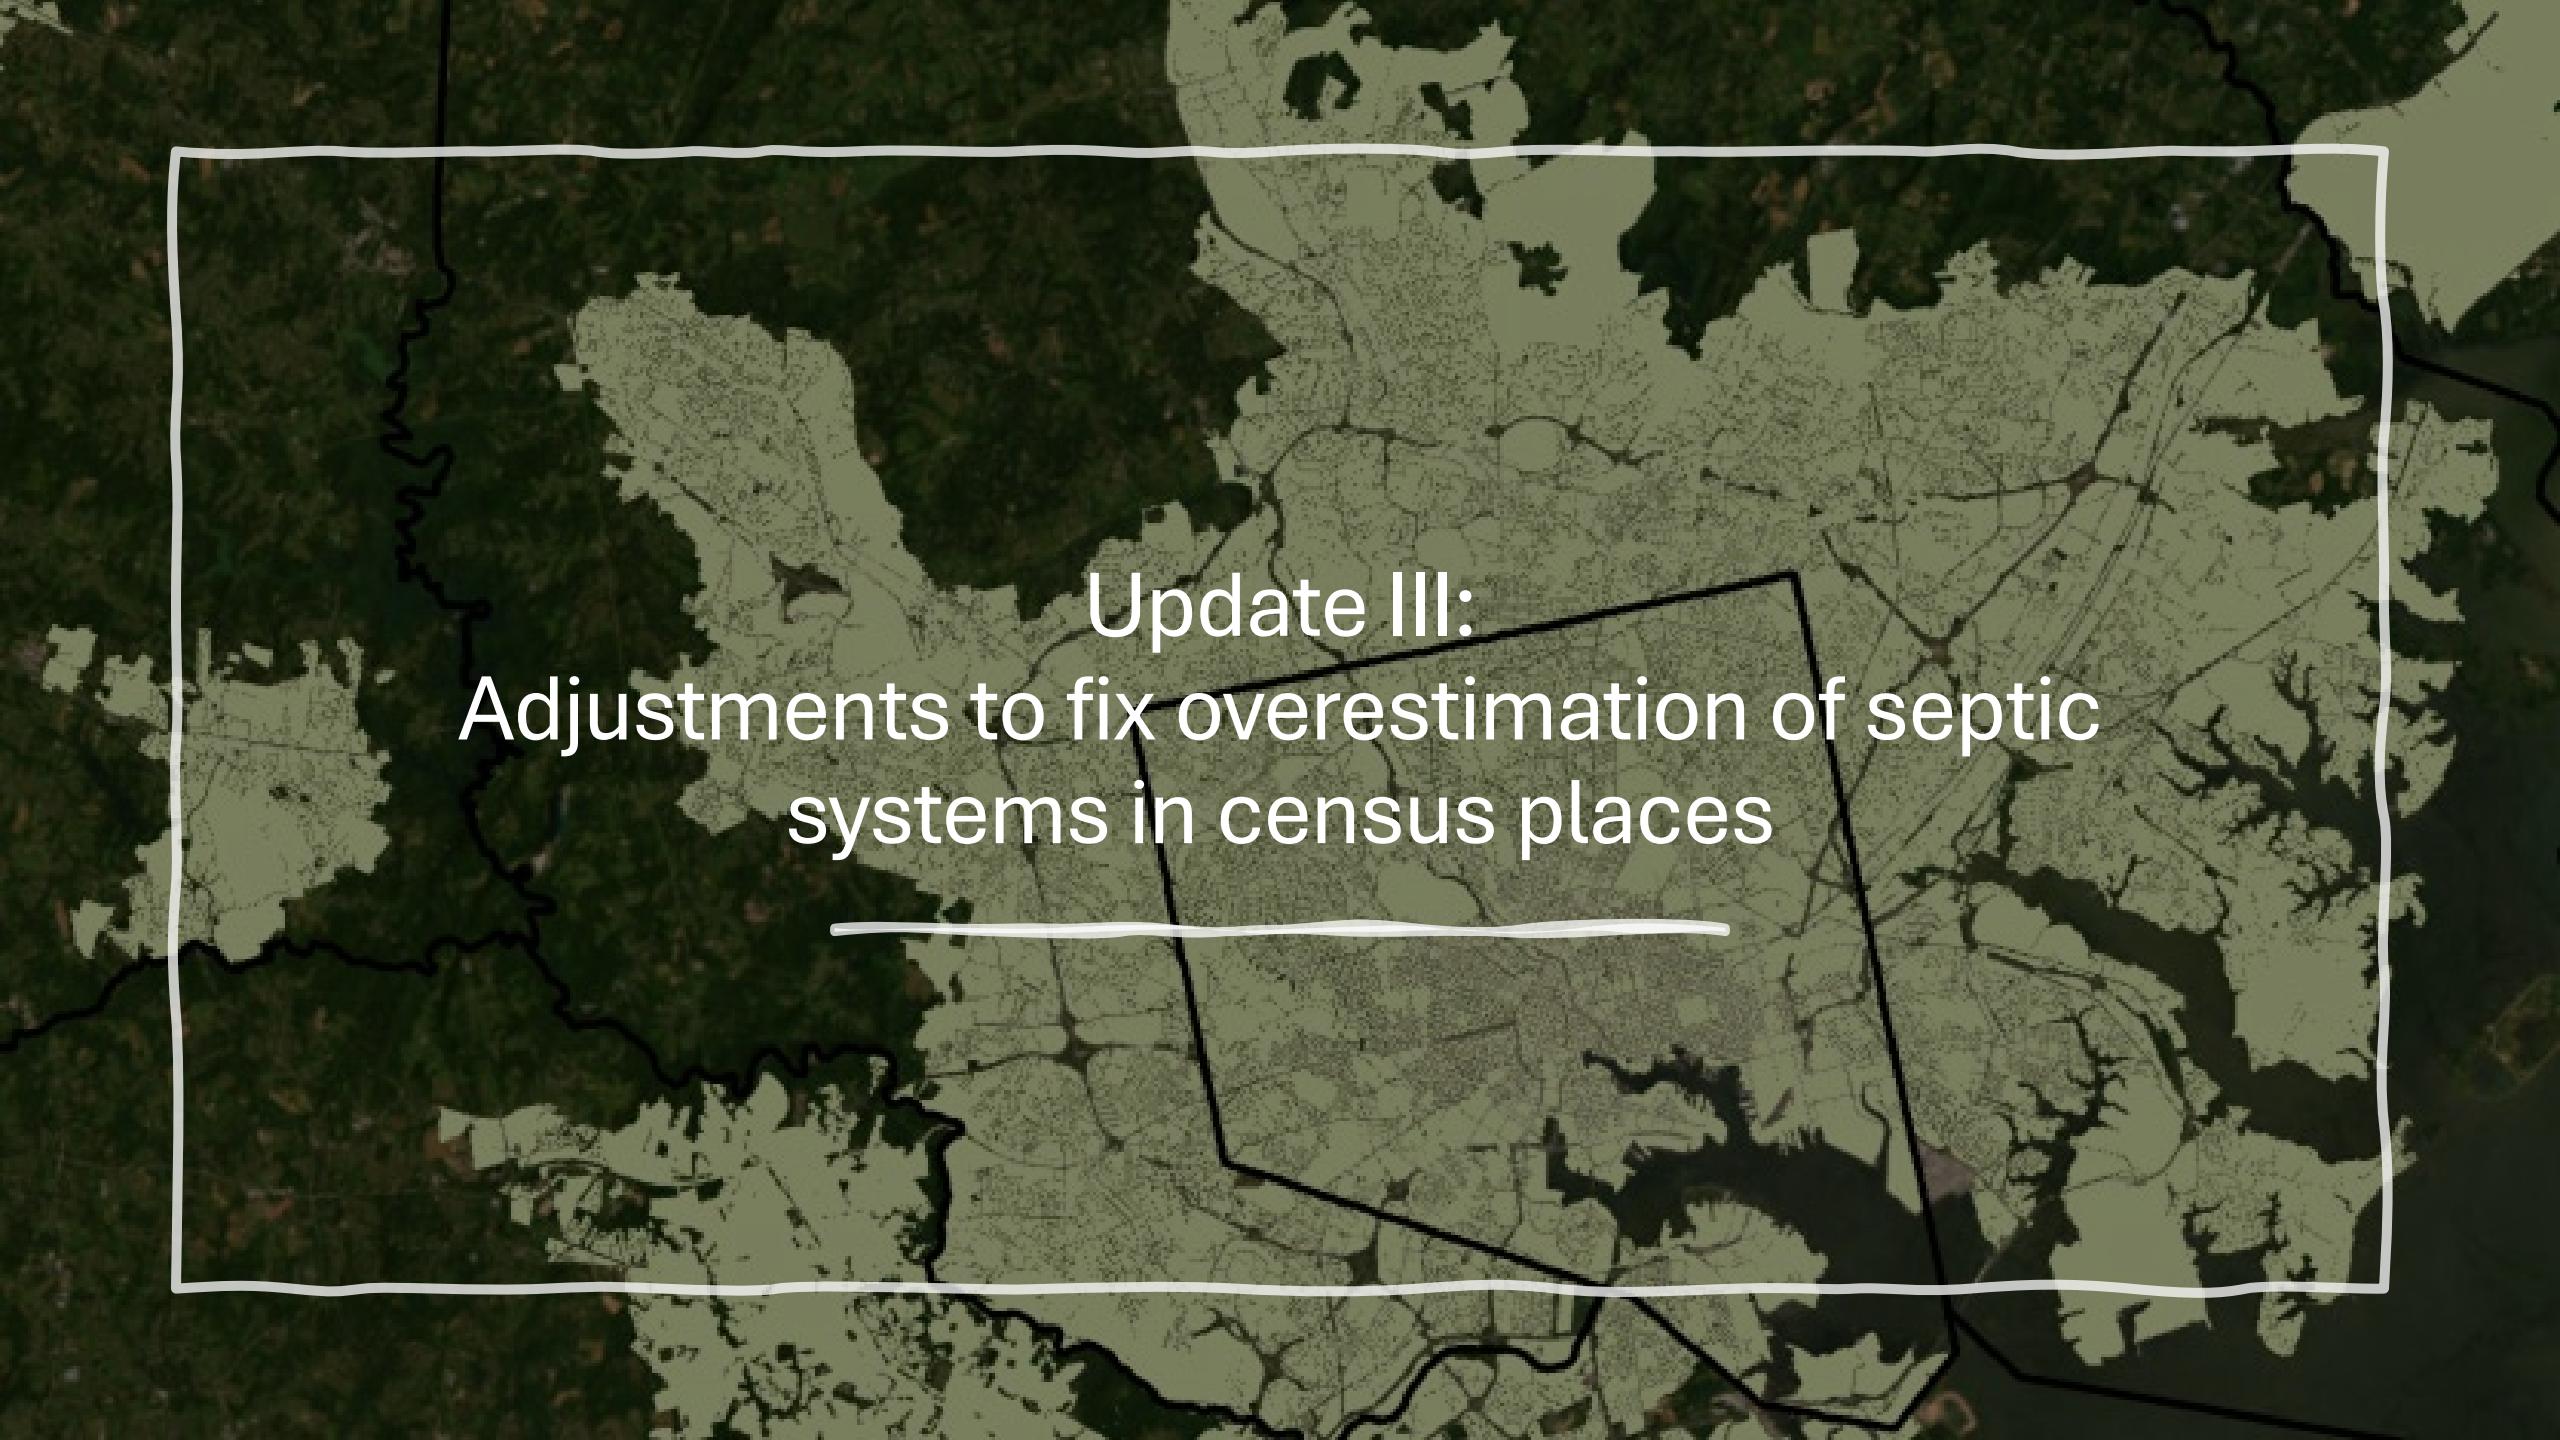

Berkeley County, West Virginia

= original P7 sewer layer

= updates to the P7 sewer layer

Update III: Adjustments to fix overestimation of septic systems in census places

Issue

County data omits
some sewered areas
within the county
(e.g., the town of
Culpeper)

Example:
Culpeper,
Virginia

 = county sewer data

Fixes/Updates

Use 2022 Clean Water Needs Survey data to identify wastewater treatment plant locations and tag overlapping 2020 Census Places currently excluded from the 2020 sewer service area

Example:
Culpeper,
Virginia

█ = county sewer data
█ = updates to the P7 sewer layer

Next Steps: Sewer Service Area Review

Draft Sanitary Sewer Areas Data Review

Introduction

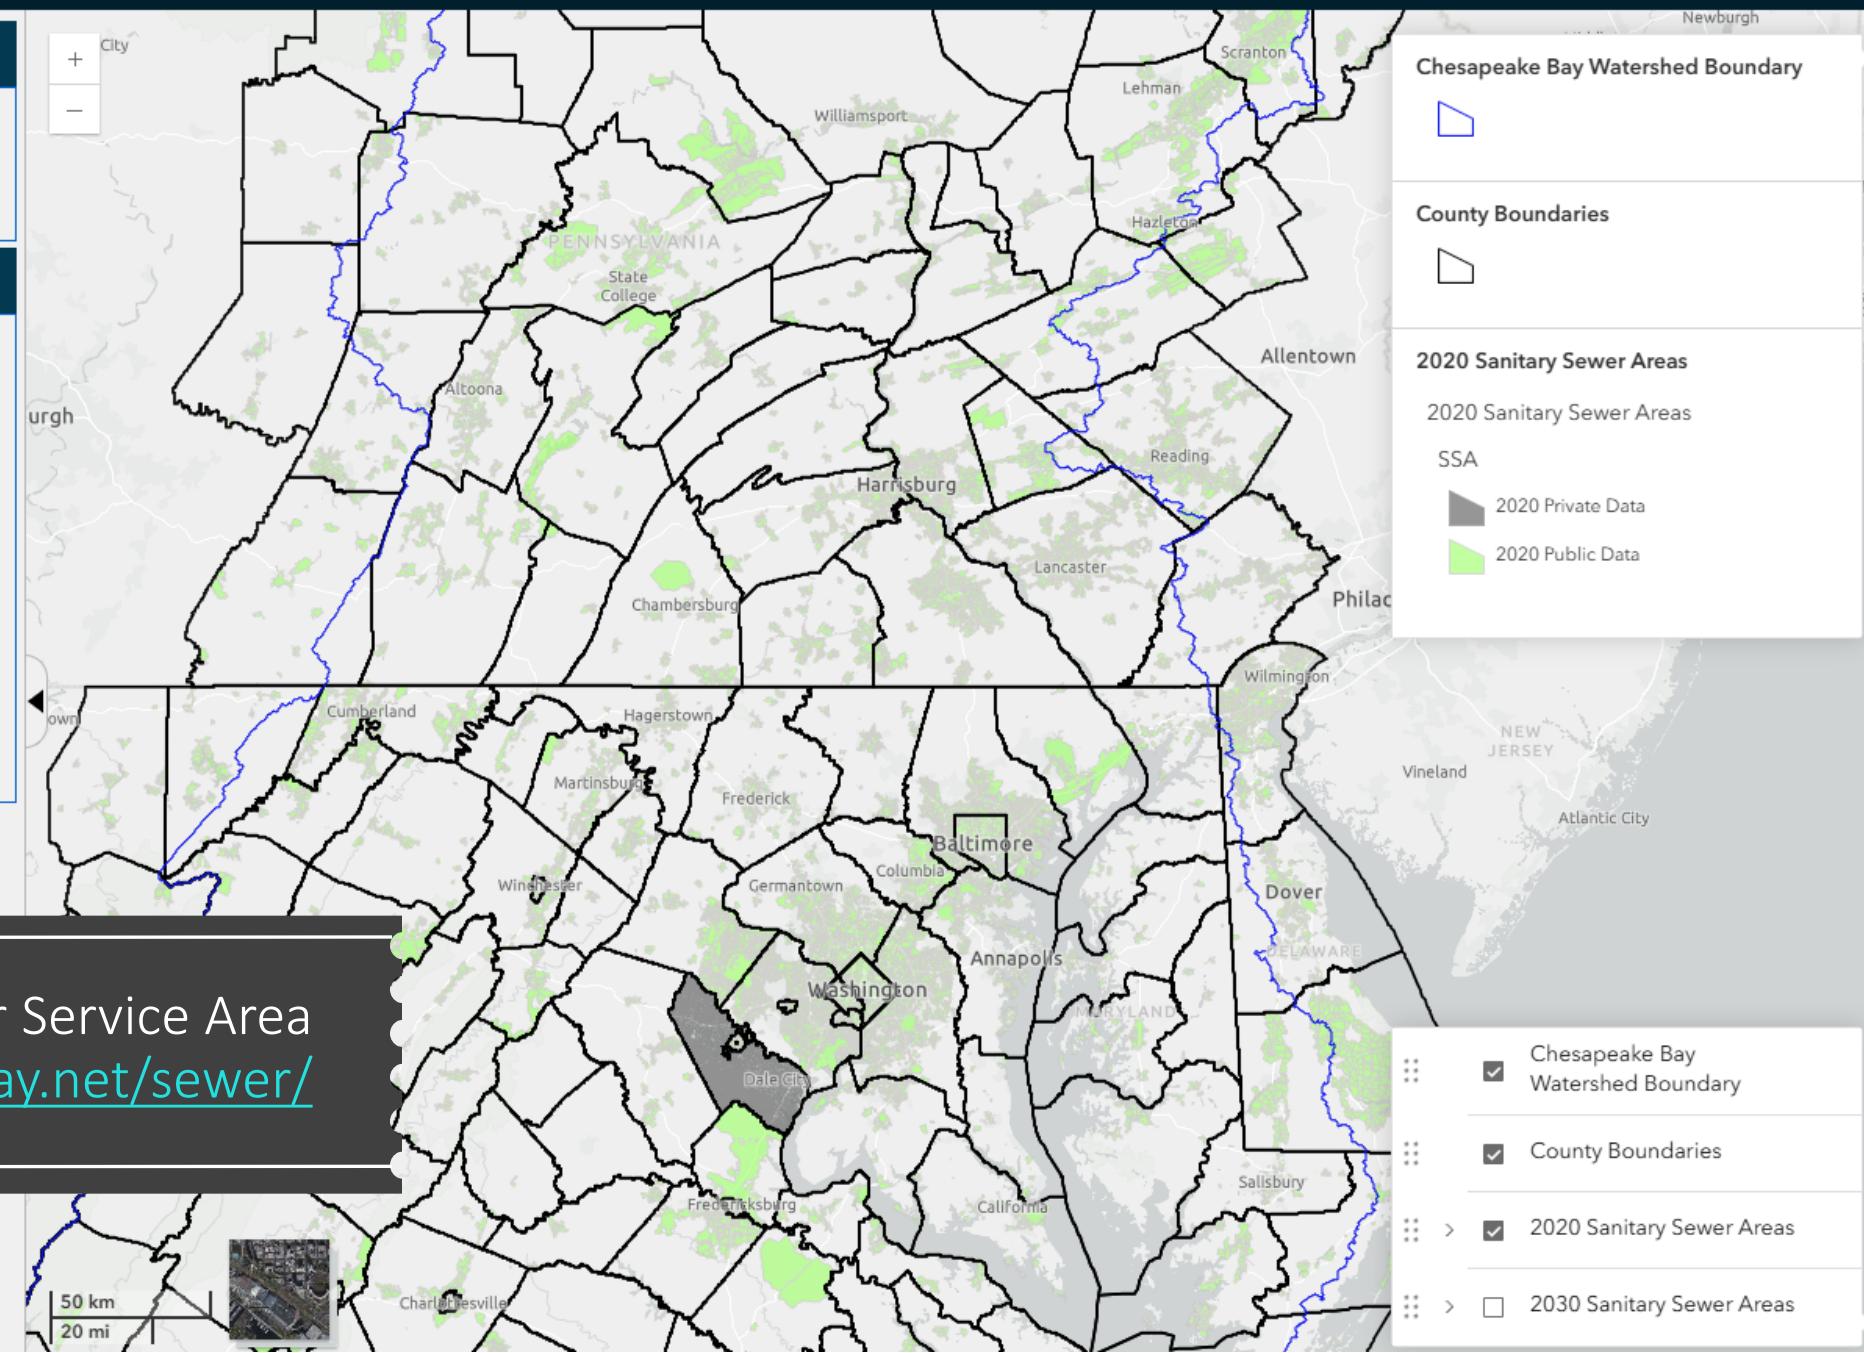

Draft Sanitary Sewer Areas

This application depicts draft sanitary sewer areas for review. Shapefiles of the sewer areas can be downloaded [here](#).

Background

This viewer hosts two separate layers showing sanitary sewer service areas (SSAs) for the Chesapeake Bay Watershed. These data will be used in Phase 7 CAST for estimating septic system pollutant loads and for forecasting future land use scenarios for CAST and other CBP applications.

- **Current SSA (2020):** This layer shows sanitary sewer service areas for the year ~2020. Any "future/planned areas" for service beyond the year 2020 are **not** included.
- **Future SSA (2030):** This layer shows expected sanitary sewer service areas for the year 2030. For Maryland, local data was provided for "future/planned" areas of service, which was used to determine areas of service in this layer. For all other states, the sewer service areas are the same as indicated in the 2020 layer.

Discussion/Questions?

Acronyms

- CAST: Chesapeake Assessment Scenario Tool
- CBP: Chesapeake Bay Program
- CBLCM: Chesapeake Bay Land Change Model
- CBW: Chesapeake Bay Watershed
- NLCD: National Land Cover Data
- P6: Phase 6 [Watershed Model]
- P7: Phase 7 [Watershed Model]
- SSA: Sewer Service Area
- USGS: United States Geological Survey
- USWG: Urban Stormwater Workgroup
- WWTWG: Wastewater Treatment Workgroup
