

Chesapeake Bay Watershed Technical Workgroup Meeting

Crediting NRCS 382 Fence for Annual Progress Reporting

by Bill Keeling - Virginia Department of Environmental Quality
October 2, 2025

NRCS 382 Fence

- NRCS data provides linear feet of fence no information on exclusion or riparian activities
- Study by Olivia Devereux provide VA information to estimate extent of 382 associated with riparian installations
- 29% of the reported NRCS 382 in VA associated with riparian installations

Proposal

- Report 29% of the NRCS 382 Fence reported length as exclusion fencing with grass buffer starting PY2025
- Report entire history of NRCS reporting from 2007 through PY 2025
- Assume 35-foot* width to convert reported lengths to an acreage
- VA would report length, assumed width, and acres of buffer created
- Default Riparian Exclusion credit would be applied

Discussion
