CBP Non-Point Source Analyst
University of Maryland

Current BMP Dataflow Setup

- Historic BMP implementation data from 1985-2005 currently resides in Scenario Builder.

- Jurisdictions have an opportunity to update BMPs implemented post-January 1, 2006 in NEIEN for each progress year.

- Scenario Builder pulls only implementation data for 2009 forward from NEIEN. It does not pull 2006 through 2008 implementation data from NEIEN.

1985-2005

2009-Present

NEIEN Data

Progress Data Accepted in Scenario Builder

Recommendation for 2017 and Beyond

- Jurisdictions will continue to work with CBPO and TetraTech to convert their historic data (1985-2005) into XML format and submit edited versions to NEIEN.

- Beginning with 2017 Progress, Scenario Builder will pull all implementation data (1985-2017) directly from NEIEN.

Recommendation for 2014 Progress

- Jurisdictions will have the opportunity to edit 2006 through 2008 directly in NEIEN.

- Scenario Builder will pull 2006 through 2014 implementation information from NEIEN and combine it with the existing history in Scenario Builder (1985-2005).

- HOW: CBPO and TetraTech will convert 2006-2008 data to XML format. Jurisdictions may then edit the XMLs as they see fit, and will need to submit the XMLs along with their normal 2014 Progress submission.
