Are you looking to...

- ➤ Increase local engagement?
- > Improve outreach and communications?
- ➤ Learn through hands-on workshops?
- ➤ Foster meaningful change?

We need a change in *human behavior* to make progress towards our goals of restoring the Chesapeake Bay.

Local engagement and communication are critical to encouraging that change and making a positive impact on our environment.

Behavior Change Training

This training will cover the basic concepts of communityy based social marketing and theories along with guidance for how to apply them.

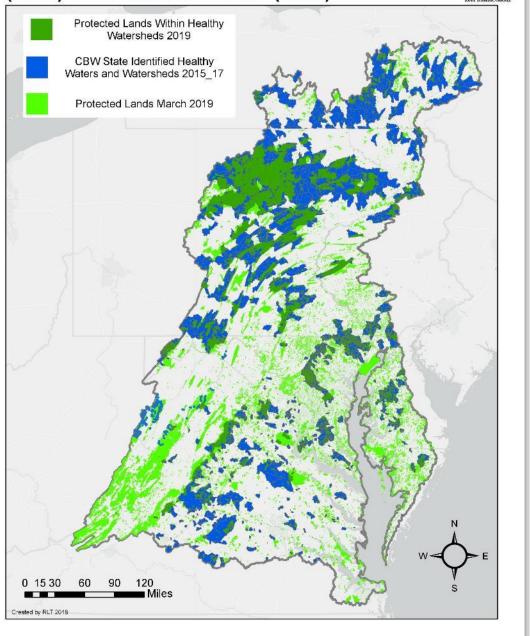

Chesapeake Bay Foundation
Thursday, October 31st, 8:30am-4:30pm

How You Can Help

- Renewed engagement of HWGIT members
- Improved Coordination and Collaboration among GITs and workgroups
- Ensure that related and/or dependent cross-GIT priorities are addressed within the CBP
- Share key information with stakeholders: Communicate results of data, maps, assessment and vulnerability information, messages, and land use policies, incentives and planning tools.

HW GIT Jurisdictional members

Please email Nora at njackson@chesapeeakebay.net for updates and corrections.

MB Response, Cont.

- Improved Coordination and Collaboration among GITs and workgroups
- Ensure that related and/or dependent cross-GIT priorities are addressed within the CBP
- Share key information with stakeholders: Communicate results of data, maps, assessment and vulnerability information, messages, and land use policies, incentives and planning tools.

• GIT Chairs meeting 10/29 focused on how the CHWA can help meet other CBP outcome needs.

• Local leadership workgroup has three ongoing efforts: Ecologix report identifying local priorities, local leadership engagement strategy, and creating crosswatershed education materials

2013 Grouping Survey items into our Strategic themes...

Develop a method to track and report watershed health and protection

 Healthy Watershed Vulnerability Assessments

TIME CAPSULE

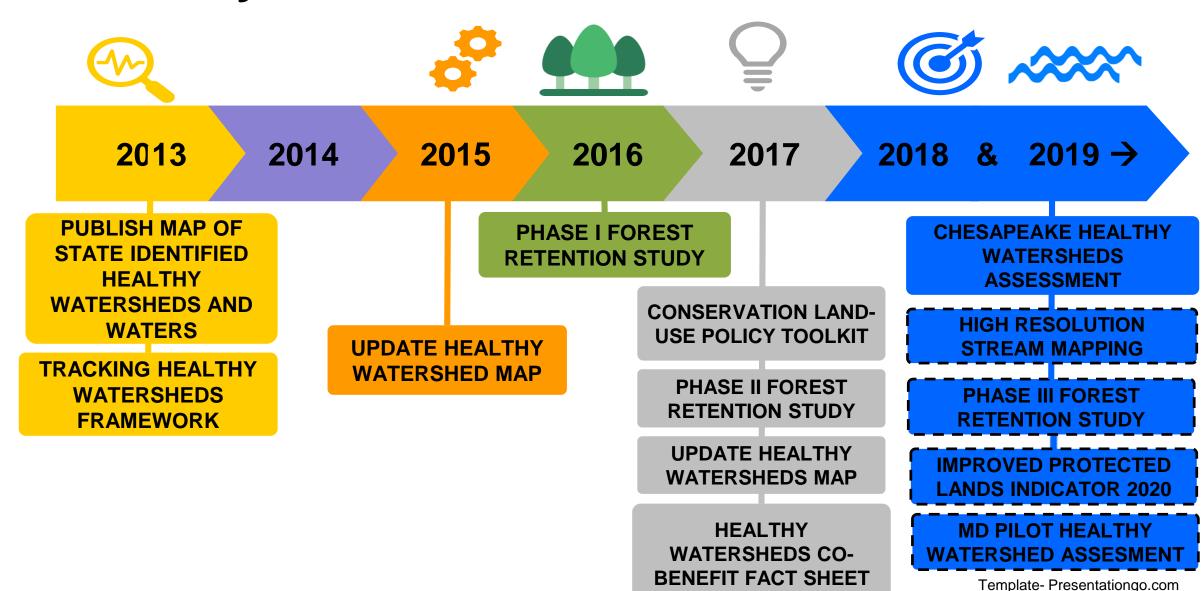

- Outreach and communications messages/tools
- Engage with local governments
- Engage with Land Trusts and other NGOs
- Develop a local pilot demonstration project
- Work collaboratively with other GITs
- Find funding opportunities
- Build upon current policy (e.g., Antidegradation)
- Innovative Land Use, TDR and Zoning practices

Technical/Analytical (Tracking)

Local
Engagement +
Communications

Policy/Program Development

Healthy Watersheds Goal Team Milestones

HWGIT Management Approaches

Tracking Healthy Waters and Watersheds

Local Leadership

Support State-Based Efforts

Federal and State Leadership

Tracking Healthy Waters and Watersheds

- 1. Technical review of data and Tetra Tech report, review .gdb and associated data, familiarize with methods, datasets
- 2. assess PHWA results and next steps for assessing progress towards achieving the Healthy Watersheds Outcome.
- 3. Publish CHWA in CBP Open Data and ArcGIS online
- 4. Assess changing conditions for all land cover metrics included in the PHWA
- 5. Guide development of GIT Funding project:
 - Implementation of Chesapeake Healthy Watersheds Assessment in Maryland's Tier II watersheds

Local Leadership

- 1. Work with Local Engagement workgroup and implement Local Engagement Strategy
 - Prototype draft format in which other resources could be modeled after.
 - Incorporate Healthy Watersheds TMDL Forest/Conserved Lands Retention Study Phase III and other related Land Use Options Evaluation Products (completed GIT funding project)
 - Development of cross outcome materials for local elected officials, to convey policies, planning incentives and tools to reduce conversion.
 (FY 2019 GIT funding project with Habitat GIT)

Support State-Based Efforts

- 1. Provide a shared forum for mutual learning.
- 2. Guide development of GIT Funding project:
 - Implementation of Chesapeake Healthy Watersheds Assessment in Maryland's Tier II watersheds
 - Work with other Jurisdictions to identify other state specific datasets that can/should be incorporated into future assessments.

Federal and State Leadership

- 1. Continued support of the Chesapeake Conservation Partnership
 - Development of an improved indicator for compiling and reporting land conservation data. (GIT funding project 2018)
- 2. Investigate additional threats to high-valued lands using best available data related to development pressure and forest, farmland, and wetland conversion utilizing the results of the Land Use Methods and Metrics outcome as well as the PHWA (FY'20-FY'21) (pending LUMM rates of conversion) (Cross listed with LUMM outcome actions)

NPS, USGS, EPA employees are leads on these activities.

Coordination and Cooperation

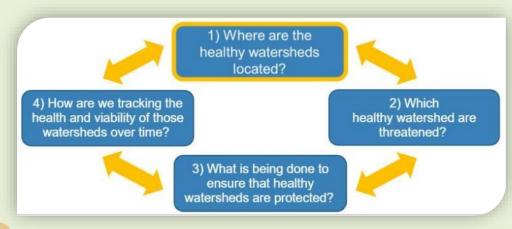

- 1. Committed coordination and cooperation with key GITs and workgroups to assure shared resources, information and priorities while reducing duplication of efforts.
 - Stream Health WG, Fish Habitat, Brook Trout, Climate Resiliency, Protected Lands
 - Host shared Climate workgroup and HWGIT meeting to work through Climate Smart tool (2020)
 - Facilitate the sharing of information related to conservation finance mechanisms with CCP and <u>Healthy Waters/Forest Retention Project-Phase III: Final Report for Chesapeake Bay Trust</u>

Management Strategy: Tracking Framework

Where are the healthy watersheds located?

How are we tracking the health and viability of these watersheds over time?

What is being done to ensure that healthy watersheds are protected?

2017 SRS Presentation

Which healthy watersheds are threatened?

STAR Science Needs

Monitoring healthy watersheds: continued support needed

- Chesapeake Healthy Watersheds Assessment project (closing Fall 2019)
- Implementation of CHWA in MD Tier II watersheds (starting Spring 2020)

Vulnerability assessment: need more information on current and future stressors and how to integrate into healthy watershed assessment

- Factors influencing vulnerability (CHWA, USGS Theme 3 Science plan)
- Historic, future and current landscape metrics, climate variability
- Identification of additional climate risk factors associated with watershed health and vulnerability. (cross outcome)

STAR Science Needs

Track the health of state-designated healthy watersheds (more to come later today)

Marginally healthy watersheds: ways to identify and track

• The CHWA can help inform this as well as the MD CHWA but there is formalized work plan actions for this need.

Communication & coordination of technical products: between GITs and workgroups; with states

• Utilize local engagement strategy to communicate technical resources as well as the policies, incentives and planning tools aimed at reducing land use conversion. (cross outcome)

Afternoon 12:30 Session

Assessing Watershed Health

PHWA employs metrics in six categories:

- Landscape condition
- Habitat
- Hydrology

- Geomorphology
- Water quality
- Biological condition

Landscape Condition

Patterns of natural land cover, natural disturbance regimes, lateral and longitudinal connectivity of the aquatic environment, and continuity of landscape processes.

Geomorphology

Stream channels with natural geomorphic dynamics.

Habitat

Aquatic, wetland, riparian, floodplain, lake, and shoreline habitat. Hydrologic connectivity.

Water Quality

Chemical and physical characteristics of water.

Hydrology

Hydrologic regime: Quantity and timing of flow or water level fluctuation. Highly dependent on the natural flow (disturbance) regime and hydrologic connectivity, including surface-ground water interactions.

Biological Condition

Biological community diversity, composition, relative abundance, trophic structure, condition, and sensitive species.

Addressing Watershed Scale

• PHWA developed nationally to provide data at HUC12 scale; this regional application required finer scale

 Developed metrics at NHDPlus catchment scale

 Calculated for all 83,623 catchments in Chesapeake watershed (average area ~2 km²)

Chesapeake Bay Watershed Health Index **DRAFT**

Landscape Condition

% Natural Land Cover (Ws)

% Forest in Riparian Zone (Ws)*

> Population Density (Ws)
